# RIKSOF Private Limited

An award-winning company for mobile and web apps

Portfolio

riksof
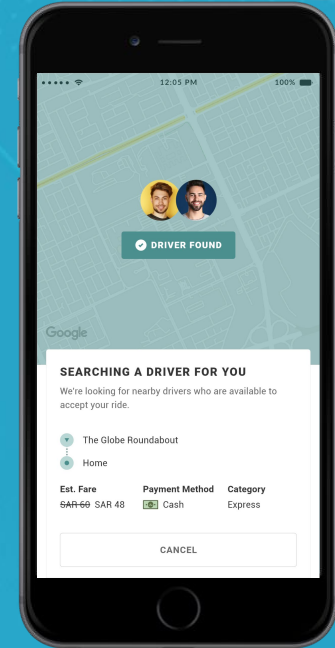

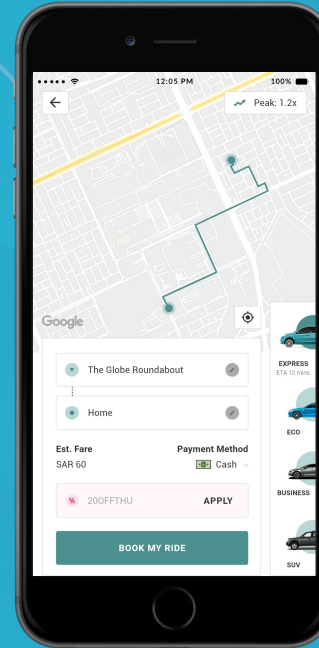

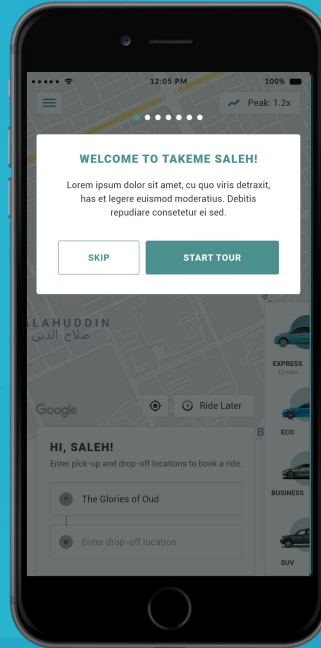

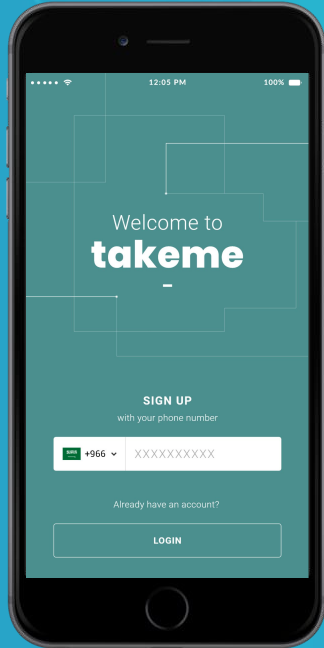

Katshing - End to end telecom portal

Problem:

The aim was to come up with a platform that saves time of customers and helps them in dealing with their cellular issues without any requirement of physical presence

Solution:

➢ Less than a minute seamless sign up process.
➢ Optimised experience on all browsers and every screen type.
➢ Data intensive application with no compromise on speed and performance

Takeme - A ride-hailing app

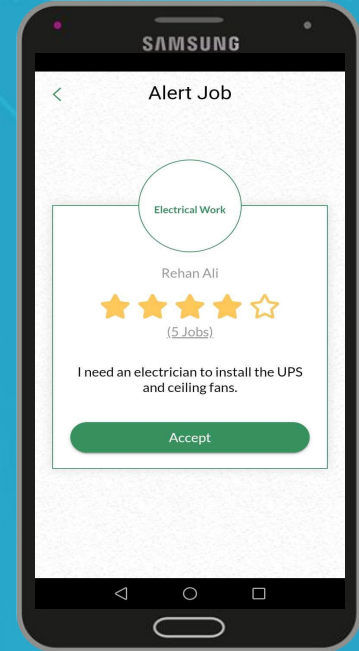

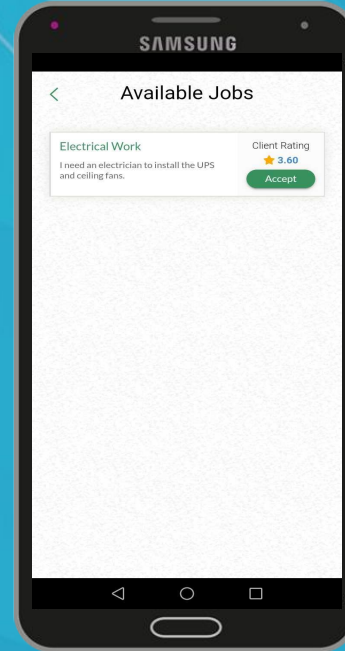

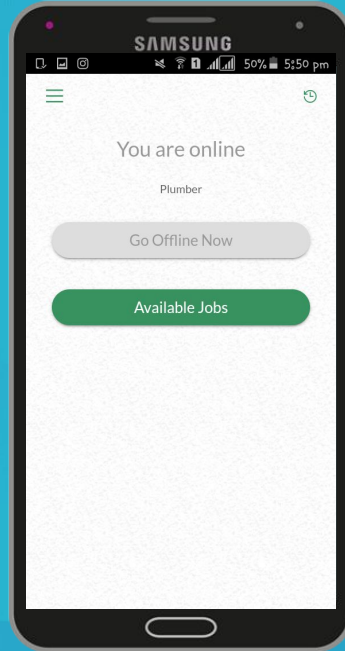

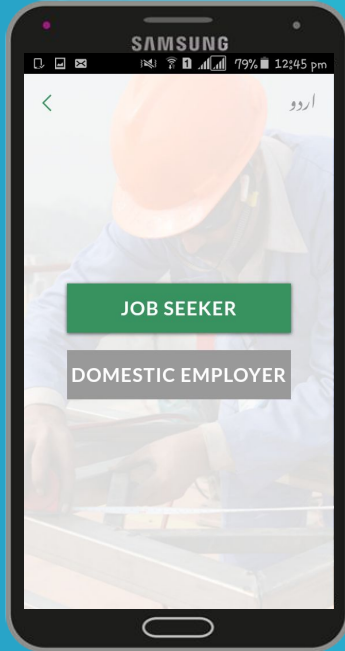

100%
Delivery by
RIKSOF

Problem:
The need was for a mobile application to connect verified drivers with customers looking for ride hailing services

Solution:
An end to end solution was delivered comprising features and flows similar to the uber model with real-time location tracking, user profiles, ratings and reviews.

riksof

Hunarmand - Public sector project funded by USAID
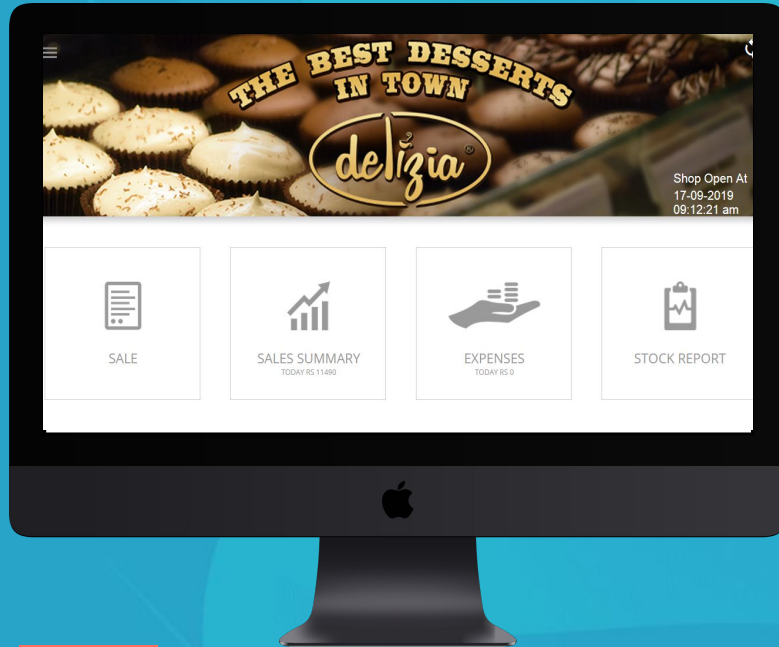

100% Delivery by RIKSOF

Problem:
The need was for a mobile application to connect certified vocational skilled workers with employers for contract and full-time job opportunities.
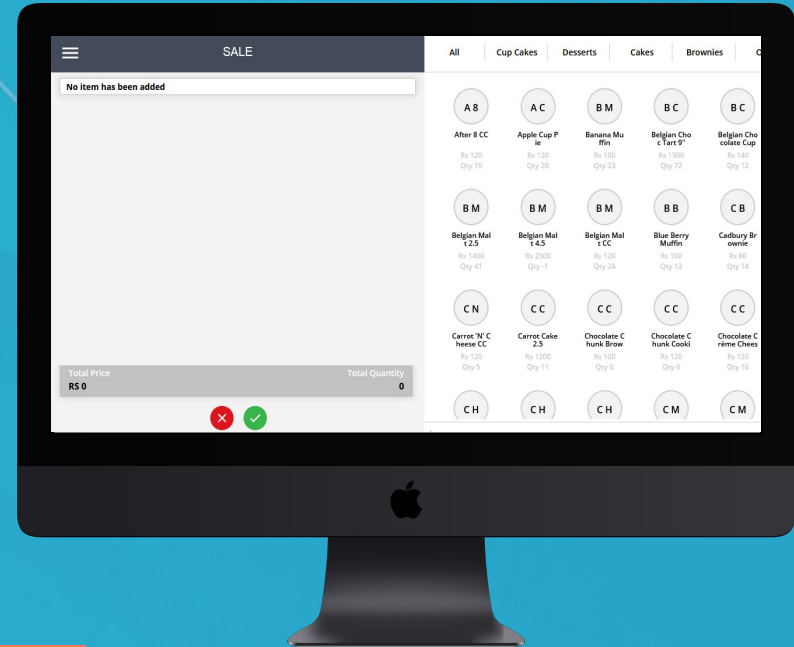

Solution:
An end to end solution was delivered comprising features and flows similar to the uber model connecting skilled workers with household consumers in real-time for various on demand services.

Delizia - Cloud based POS solution

Problem:
Delizia's existing off-the shelf POS system was unable to cater to their specific needs, supply chain processes and increasing load.

Solution:
➢ A customized cloud POS solution that is deployed for 3+ years
➢ Used in 11+ branches with over 1.1M orders punched
➢ Shop managers are able to reliably use the system to process orders fast and efficiently

Karachi Grammar School - Student tracking system
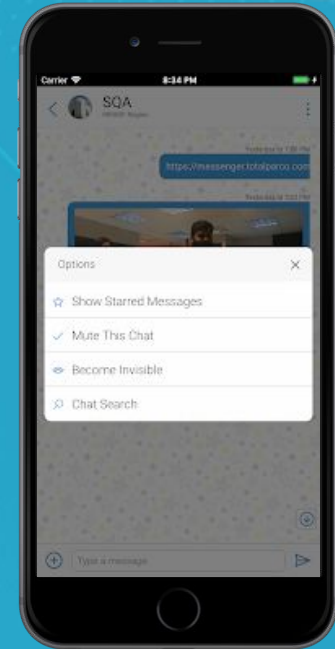

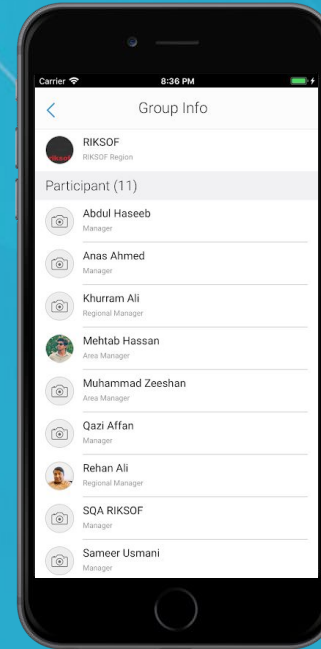

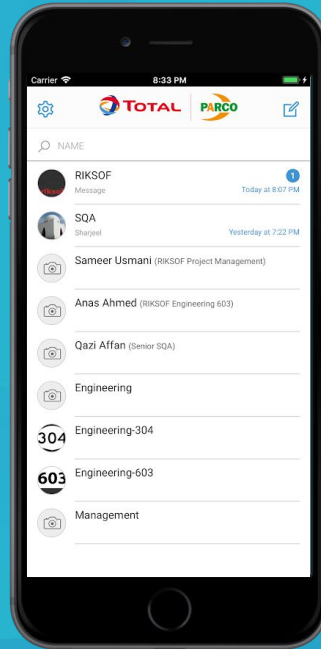

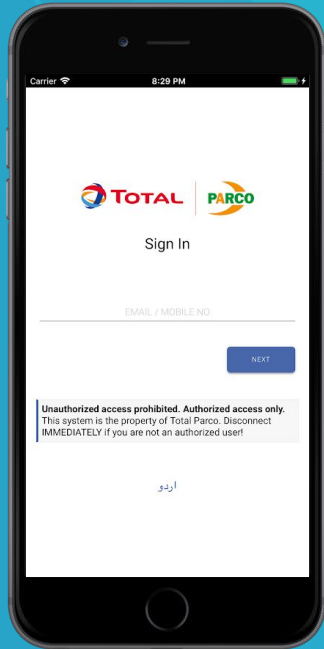

100%
Delivery by
RIKSOF

Problem:

KGS desired to automate some of the workflow processes followed at the institute to improve operational efficiency and satisfy the dynamic needs via a student tracking portal built from scratch.

Solution:

➢ Deployed since 3+ years that fully meets attendance processes and rules of institute
➢ Over 3M attendances marked
➢ Fully maintained & managed by RIKSOF
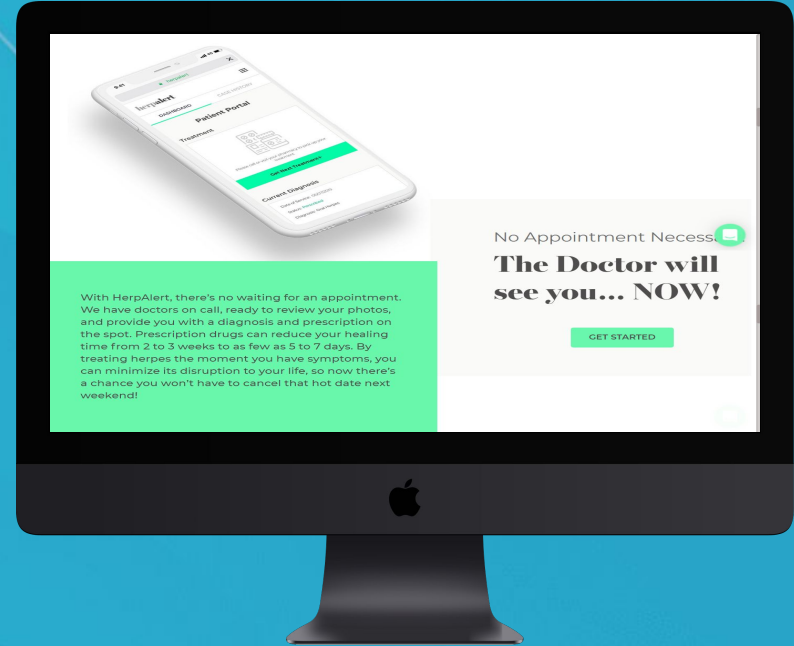

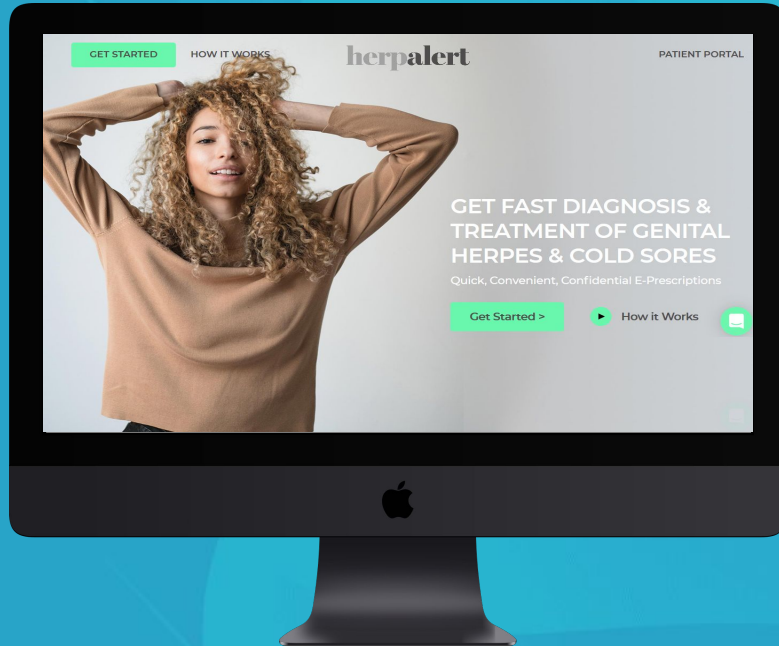

riksof

TOTAL PARCO - Enterprise messaging app

Problem:
Having a network of 800+ dealers, Total Parco needed an easy to use mobile application, which allowed real-time communication with all dealers at all times

Solution:
A fully customized mobile app was made for internal communication that is live on both iOS and Android platforms. RIKSOF continues to host, maintain and support the apps.

HerpAlert - Health diagnosis application

Problem:

The need was to come up with a web and mobile application that allows patients to get diagnosed and treatment for Herpes on the same day.

Solution:

➢ Connects patients with doctors for quick diagnosis and treatment of herpes disease
➢ Deployed since 3+ years
➢ The app has handled more than 7K+ cases
➢ HIPAA and GDPR compliant

riksof

# DocAlert- Health diagnosis application
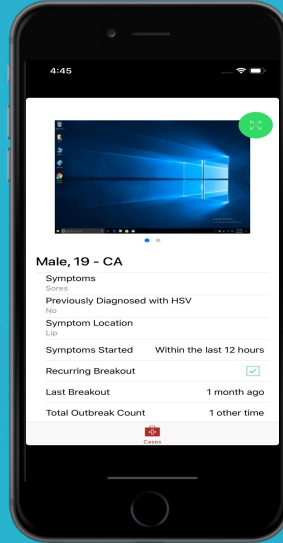

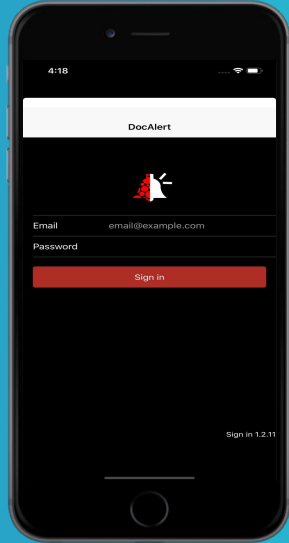

Problem:

The need was to come up with a web and mobile application that allows patients to get diagnosed and treatment for Herpes on the same day.

Solution:

➢ Connects patients with doctors for quick diagnosis and treatment of herpes disease
➢ Deployed since 3+ years
➢ The app has handled more than 7K+ cases
➢ HIPAA and GDPR compliant

riksof

eCHDP - A health records system

Problem:

The need was to build a system that can be used by various clinics to store only valid patient information for payment tracking and reduce the denial rate.

Solution:

➢ Manage and track PM160 forms
➢ Electronic billing/printing and payment tracking.
➢ The application was successfully run and managed over a period of approximately 10 years.
➢ GDPR compliant

# BI Solution - Dashboards for 2 hospitals in KSA

Problem:

The management had created a list of KPIs. They wanted to measure where each hospital stand on those KPI's against benchmarking international standards. The manual forms they were using and the unstructured data did now allow them to do this analysis.

Solution:

➤ Power BI and pentaho were used as BI tools
➤ 30+ dashboards including 100+ reports
➤ Integration with existing DB systems at hospital
➤ Onsite development by RIKSOF

riksof

# MidPrice - Marketplace for currency exchange

100% Delivery by RIKSOF

Problem:
The idea was to come up with an app that would allow users to exchange currency anytime and anywhere.

Solution:
Developed mobile apps that allows users to connect, create and accept offers for currency exchange anywhere and at anytime. Connecting users based on nearby location and messaging module are key features in this app.
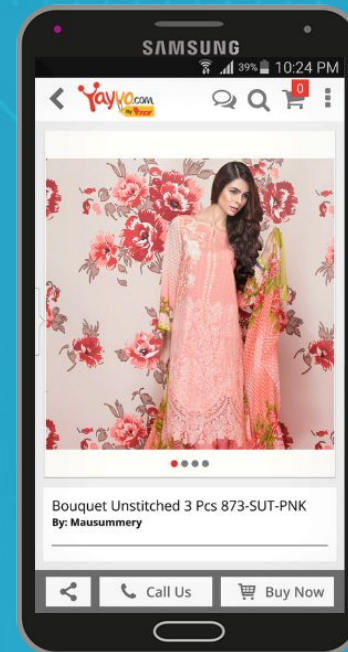

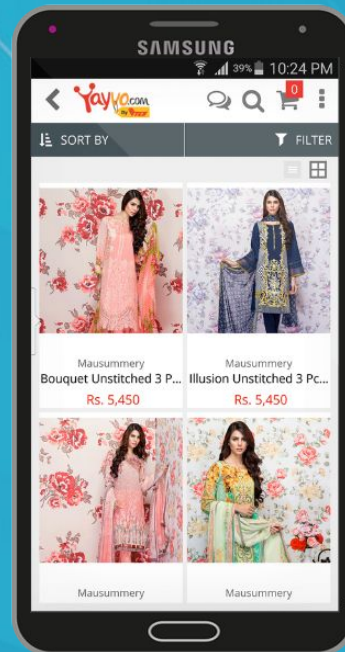

# CURI - A social networking app

Problem:
The client's ambition was to build a social app that allows users to discover, share and make decisions based on their preferences and interaction with other user groups.

Solution:
RIKSOF was responsible for building the highly feature rich app for both platforms from scratch. The application has an exciting onboarding process with a pleasant user interface.
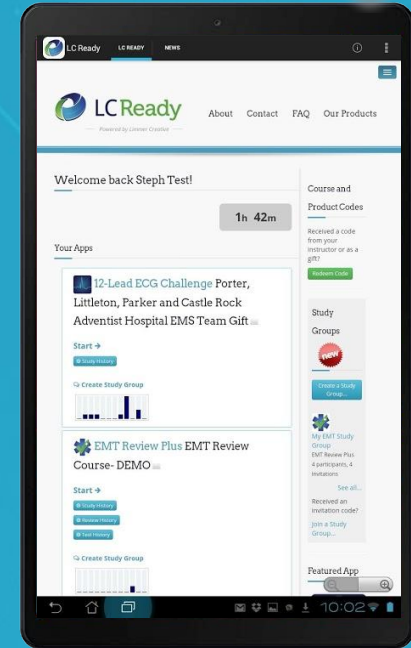

# Yayvo - Online shopping app

Problem:
Yayvo had a Magento store and they wanted it to be available as an app. The default app builders for Magento were not giving desired performance results.

Solution:
RIKSOF built native iOS and Android apps that integrated with the Magento store using Rest APIs. Users were treated to a fast and seamless experience in placing orders on their phone devices.

LC Ready - Educational app for test preparation

Problem:

LC Ready desired to build apps that would help students with test preparation for different courses. They want to provide a platform where students can go through the different levels of tests to gauge where they stand and are fully ready when they appear for the examination.

Solution:

RIKSOF was assigned the responsibility to develop the full module as part of this project. Several of LC Ready test preparation products are live and available for purchase. After successful implementation of this project. RIKSOF continues to be engaged with the client for new updates.

riksof

Coursio - Online course management

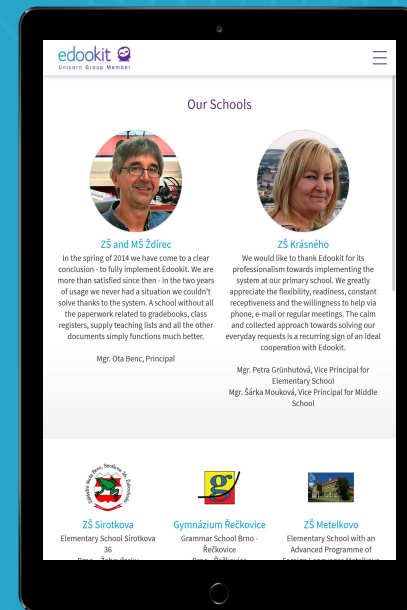

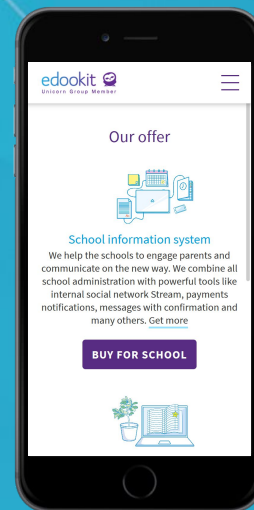

Problem:
With coursio, the aim was to build a platform that enables individuals and organisations to create, customise and offer online courses with a wide set of features depending on the needs of the end user.

Solution:
RIKSOF dedicated a team to work on this project. This was an ongoing engagement where client would directly engage with the development team and build features with evolving needs.

edookit - All-in-one school information system

Problem:
The need was to build an all in one school information system that has everything a school needs including communication, timetable, grading, homework, certificates, class record book, payments and electronic GDPR consents.

Solution:
RIKSOF was part of a global team for this project. Successfully collaborated with teams from different time zones to contribute on multiple modules developed as part of the system.

THANK YOU!!
