ARCANYS

ARCANYS, Swiss Reliability + Filipino Skills

ARCANYS is a Swiss technology company specialized in developing high quality software with a strong focus on innovation.

Run by a team of successful entrepreneurs, Arcanys works with established companies as well as startups who want to get their new products or want to launch new ventures on the market as soon as possible. We build teams around startup ideas and dedicate resources to technical teams to help our clients find their way faster than anyone.

ALAN DEBONNEVILLE

Co-Founder & CEO

- E-Commerce
- Management
- Outsourcing
- Entrepreneurship
- Start-ups
- Operations

View Profile on LinkedIn

Alan co-founded Arcanys in 2010, bringing 15 years of extensive experience in start-ups, e-commerce, software and innovation with him. Alan started his career in 2001 as a co-founder of IGE (now called IMI Exchange).

Alan ran all operations of this self-funded startup that grew from 0 to 400 people in Hong Kong, China and Korea. IGE became the leading e-commerce business in the trading of virtual assets (in online video games), with more than 1m customers in a year and $90m USD in revenue.

IGE attracted more than $60m USD from Goldman Sachs Capital Partners, Oak Investment Partners and Maverick Capital.

In 2006, Alan co-founded ChildUp, a company that helps parents teach math and languages to their preschool children. Following on that track, in 2012, Alan established the Arcanys Early Learning Foundation, offering more than 3,000 free math classes per month to parents and young children.

JARI SOINI

SVP, Software Engineering

- Agile Methodologies
- Project Management
- Software Development
- Team Management
- Start-ups
- Operations

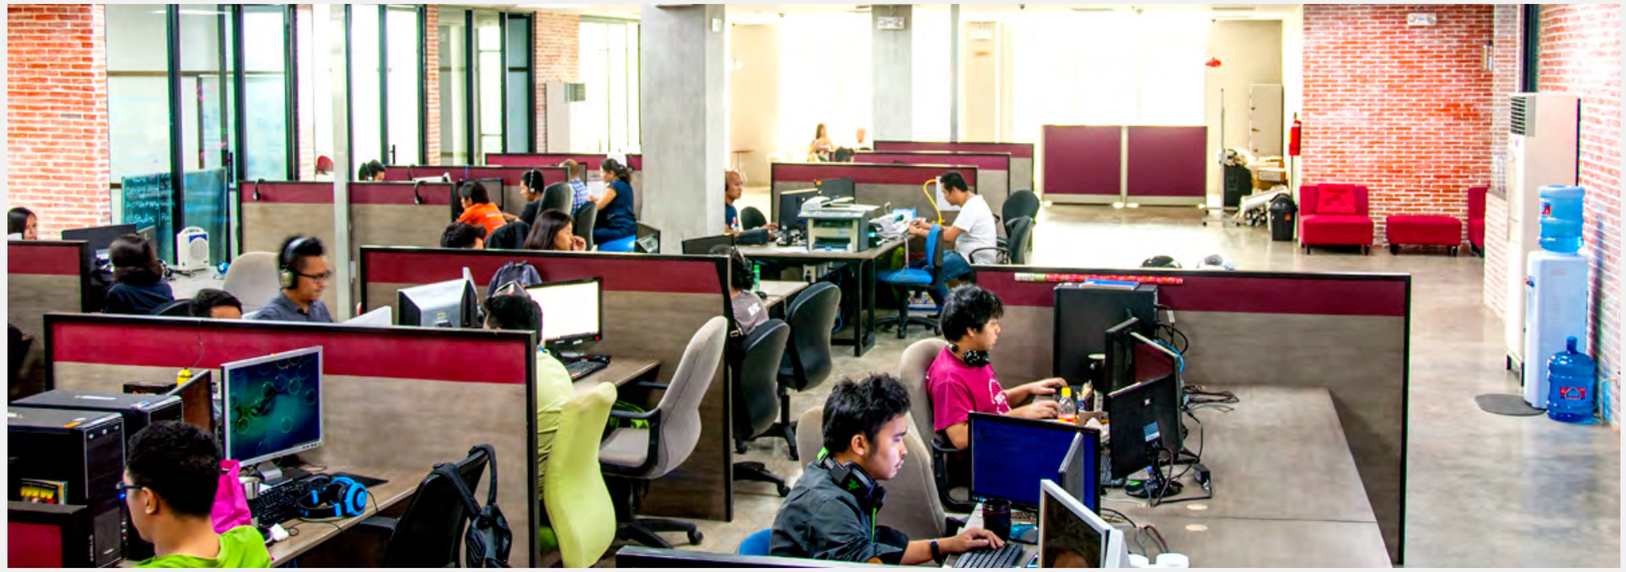
View Profile on LinkedIn

Jari joined Arcanys in February, 2013 to lead the software department of Arcanys, making sure teams are delivering projects on time with high quality and ensuring continuous improvement for all engineers.

Jari brings over 17 years of entrepreneurial and software outsourcing experience, starting his career in 1998 as a co-founder of Tietosärmä, a software development firm that later acquired by a larger competitor, Plenware in 2005.

At Plenware, Jari managed and oversaw successfully several multi-site offshore projects, in Finland, Romania and Estonia. In 2008, Plenware was acquired by a stock-listed global SW consultancy called Cybercom, and Jari carried on with the new company to lead Chinese software operations of Cybercom, serving several Fortune global 500 sector customers.

Team Arcanys



Startup Accelerator

Entrepreneurship is deeply rooted in Arcanys' DNA. With more than 10 years of experience creating Internet startups, the Arcanys team is passionate about enabling business creation for people with fresh ideas.

Due to the wide selection of startups helped, Arcanys is now evolving from a classic software outsourcing company into an engine for launching new ventures and business ideas. Arcanys can give solid advice not only in technology, but also a fresh perspective on Internet business models and entrepreneurship, particularly when it comes to saving funds, developing low cost prototypes and launching an MVP and final product iteratively.

In some cases, Arcanys receives equity in exchange for development services, if both parties feel it's of mutual benefit.

In parallel, Arcanys' team is also creating its own products, such as ThxBox, a SaaS used by General Electric Korea.

Go To Table of Contents

Dedicated Teams

Arcanys team members are versed in European culture thanks to the experience of working with 9 Europeans on site in our Philippine office.

Our clients also receive some education on how to work with Asian developers; which pitfalls to avoid and best practices are shared to both sides to ensure smooth operations.

Daily and weekly reporting systems make remote management clear and simple.

Senior Architects are assigned to all projects. This allows every Arcanys developer to be coached by a dedicated senior architect daily.

Exceptional language skills allow all of the Arcanys developers to be put directly on the phone with customers.

Our culture of continuous improvement and over achievement is reflected both in the personalities of the management and the development team. These traits are criteria each employee must meet before joining the company.

Arcanys works with start-ups, web agencies, marketing agencies, or individuals for their web projects.

The Arcanys mobile developers team has completed more than 80 mobile development projects covering all the main technologies.

ARCANYS

Web Development

Arcanys works with start-ups, web agencies, marketing agencies, or individuals for their web projects.

We are able to handle almost any software needs as we have a wide experience implementing punctual projects in:

1. CMS platforms: Drupal, Wordpress
2. E-commerce Platforms: Magento, Drupal Commerce, Prestashop
3. Frameworks: Zend, Codeigniter, Symfony2, Laravel
4. Other technologies: .NET, Java, C++, Python

<html> {css} javascript()

Value Added Services

In addition to the software development services we offer, Arcanys also provides added value services for your existing business and products through:

Business Analysis

Our Senior Business Analyst has 15+ years of experience working in the US, which allows us to provide a thorough assessment of a project's needs and potential changes. By following specific guidelines and specifications, the project's business requirements are converted and documented to technical specifications to ensure accurate delivery during the implementation.

Design - UI/UX

Backed by more than 15 years of industry experience in UI/UX Design, the Arcanys design team provides Design Analysis to projects, to determine user needs and to come up with the best design solution for any project. Whether designing from scratch or providing add-ons and improvements to existing templates, our experts deliver creative and innovative experiences to your ideas.

Testing

Arcanys offers dedicated quality assurance and testing services (TaaS) in different categories for mobile, desktop and web projects. Our highly skilled test engineers with expertise in both manual and automated testing, and with use of top of the line tools, apply Agile methodologies, thereby greatly improving development quality and costs.

Mentorship

30+ years of experience across the management team in building startups, ensures Arcanys is comitted to transforming startups from fresh ideas, to multi-million dollar companies. We provide mentoring services to ensure startups and their founders understand their needs and problems better. We advise them on a wide scope; from technology needs, to developing or refining business models to gather additional funding.

Customer Support

With our 13 years of proven 5-star quality customer service,we have built businesses handling up to 5,000 orders a day and $90M USD revenue through live chat only. Our CS Startup package offers 24/7 real time phone, chat and email support to your business. Your customers deserve real-time information about your products and services as well as answers to their questions.

Why Cebu?

Over the last few years, an increasing number of multinationals have decided to relocate or open their offices in Cebu City. Companies such as Lexmark, JPMorgan Chase, Timex, NEC, Epson, Accenture, Telstra, IBM, etc. understood that Cebu is the best place in the world for outsourcing.

Foreign investment welcome

Local legislation grants investment and tax incentives to foreign businesses and the dedicated Business and IT Parks offer world-class infrastructure.

Connected to the world

The Mactan-Cebu International Airport is just 15km away from the city center and provides multiple daily flights to all the major cities in Asia.

Pleasant environment

Cebu City is safe, uncongested, sunny and has beautiful beaches to spend the weekends.

Attractive cost of living

Cost of living and salaries are between 20 to 40% lower than in Manila, it seemed to us like a no-brainer.

Booming economy

In the last 3 years, the Gross Regional Product (GRP) has grown on average by 10.2%/year and the direct employment hired by the BPO industry totals 95,000 workers (2012). Cebu City city has been thriving, the IT Park and the Cebu Business Park are two examples of this growing attraction and vibrant economy.

Cultural Fit

There are many reasons why the Philippines and Cebu are great for outsourcing:

English Speaking

English is the primary language for business in the Philippines, which is currently the 5th largest English-speaking country in the world with a 97.5% literacy rate.

Western Culture

Philippine history includes colonization periods for over 500 years, where the country shared their culture with Spain and the US. This makes Filipinos accustomed to Western business practices and culture, allowing for smooth operations.

Award Winning

The Philippines has won various international awards. The country was 3 times named the "Offshoring Destination of the Year" by UK body National Outsourcing Association and recently ranked 2nd only to India in the "2014 Tholons' Top 100 Outsourcing Destinations" by Tholons, a strategic offshoring advisory firm.

Outstanding Service

Filipino professionals are hard workers by nature. With their innate service-oriented culture and work ethic, they take pride in providing world-class service.

Top 10 Global Player

Cebu has been named in the top 10 of the world's 100 best outsourcing cities by Tholon. Coming in at number 8, just behind BPO powerhouses like Bangalore, Manila and Mumbai.

Cost Saving

Outsourcing to the Philippines can reduce costs by up to 85% compared to the US, with salaries in the Philippines set at a daily minimum wage of around $8 USD per day.

Educated

With competitive standards in education, and reputable and internationally recognised universities, the Philippines produces more than 120,000 highly skilled graduates of IT, Engineering and Technology degrees every year.

Go to Table of Contents

Why are we different?

Experienced team of expats

With 6 experienced Western managers with over a decade of experience building and managing IT companies, Arcanys has brought and implemented European-standard processes, transparence and attention to details. With this in mind, we offer an unorthodox choice in the outsourcing industry as our only goal is to provide the best value for money and outstanding results.

Innovation focused

We are specialized in developing high quality software with a strong focus on innovation for established companies as well as Startups who want to get their products on the market as soon as possible. We leverage our core expertise with additional UX / Design, Customer Care and Digital Marketing services.

Flexibility & Scalability

We have years of experience building teams from scratch and ramping them up or down as necessary. With our in-house recruitment specialist, we maintain a pool of talented programmers that are ready to be deployed as needed.

We offer you the flexibility to easily scale up or down, or even to terminate your contract at any time within a week to a month notice.

Lighting fast

Starting with us is simple, clear and faster. Working with startups - who are always in a rush as the time to market is a matter of life and death - taught us to start quickly.

With a team of very talented developers, designers and business analysts, we often speed up the development of a project compared to in-house development.

Outsourcing part of your team when you need additional resources is not without its share of challenges, but with the right provider it can also come with great rewards. Looking at the table, the figures speak for themselves. The benefits of working with Arcanys don't stop there however.

On top of being able to provide considerable cost savings compared to in-house developers, you will also benefit from a dedicated team with unparalleled expertise and the flexibility to ramp up and down quickly for rapid results. We are able to provide these benefits to you by focusing on three fundamental principles:

People – your team is made up of only the most talented developers, selected with your input to match your project.

Process – we use agile development best practices and transparent reporting to deliver you reliable results faster.

Passion – a commitment to building you cost-effective & reliable solutions that work.

We are confident that we can help you grow your business, and to make it even easier for you to experience the benefits of working with Arcanys, we have no setup fee and the ability to cancel with only two-days notice in the first month.

Arcanys puts a lot of efforts selecting the right people

Technical skills

With a multitude of technical Universities spread across the city and the local engineering ecosystem of both US and Japanese companies, Cebu City is a true talent pool for software companies.

Having a technical career is highly appreciated in the Philippines, people are usually passionate about their work and this is one of the reasons why our developers are in a constant self-improvement.

Prior to hiring a developer, we make him/her take advanced technical tests in order to assess his/her skills and decide if they would be a judicious addition to our team.

Ability to work with western customers

We understand that there is way more required of a developer than raw technical skills. Working with other cultures is always a delicate situation if one didn't receive a proper training. Most outsourcing horror stories start with a misunderstanding due to language barrier and cultural gap.

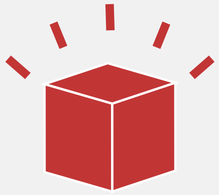
This is why all our developers receive weekly cultural classes. We put a lot of emphasis on the inter-cultural training and on how to better collaborate with people from Western cultures, hence increasing the speed and quality of the output.

Fit to company culture & knowledge retention

Arcanys enjoys a passionate and trouble-free work environment composed of more than 90 employees that work hand-in-hand, and we want to keep it that way. We only hire team players that are passionate about their work.

As developers love what they are doing, this considerably helps Arcanys enjoying a level of attrition clearly lower than most companies in the software development outsourcing industry (less than 10% per year). This mutual trust has given impressive results in terms of attrition and happiness at work and ensure high knowledge retention.

How we work



Project delivery models

1. Time and material based

Preferred model of Arcanys and of most of our customers. By using the latest Agile methodologies (Scrum, Kanban, etc.), we provide visible incremental results after every couple of weeks and give the customer an option to change the requirements during the project time. This way, we can make sure that at the end of the project, our customer is getting the product fitting to his needs, even if it was just a vague idea at the beginning. Our expertise in the right use of the Scrum methodology guarantees a very high level of customer satisfaction.

2. Fixed price projects with fixed scope

Ideal for small mobile projects and basic websites where requirements are known in details at the beginning of the project.

Training and competence development model

Quality is key at Arcanys, and we pay great attention to our developers' training, both in soft and hard skills such as Weekly cultural & language training, Process training, Scrum basic & advanced trainings, Burndown charts training, Agile estimating and Planning poker trainings.

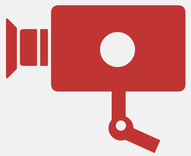
Agile methodologies practiced and used

1. Scrum: for new projects

Scrum allows our customers to receive working products every 2 to 4 weeks, keep high visibility of progress and get regular feedback. This agile methodology gives a definite flexibility to the project and allows to respond easily to change in order to meet the customer needs. It also has low bureaucratic overhead.

2. Kanban: for maintenance projects

The high priority bugs get fixed first and low priority ones become high priority when the deadline approaches. If there are no bugs, the team will focus on improvement jobs.



Site and ICT security

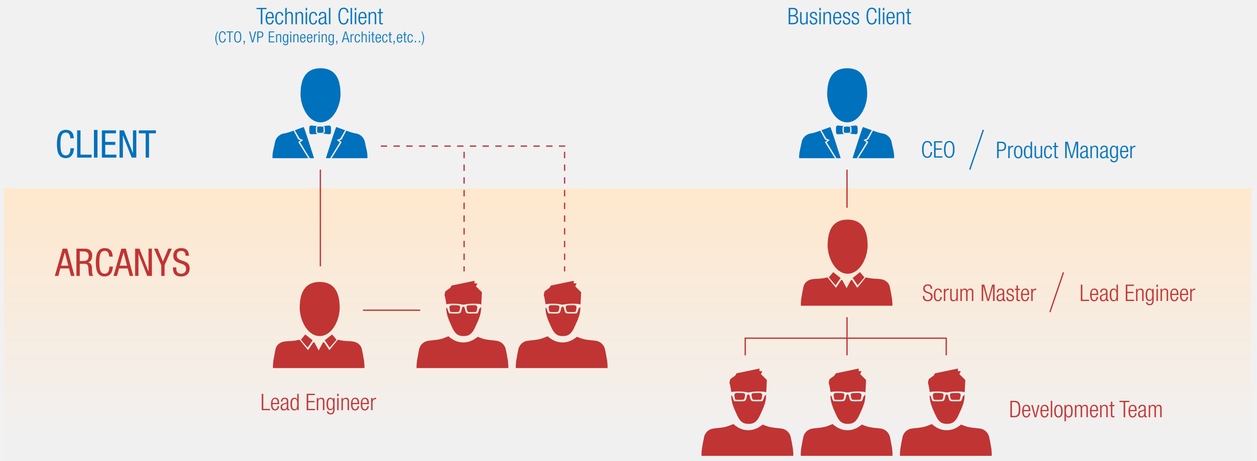
Offices are video monitored 24/7
Strict biometric access control
Building is secured 24/7 by guards
Offices are controlled 24/7 by our own personnel
No external access of company systems except executives and clients by VPN accesses

How we communicate

Direct access to your developer(s)

One of the reasons why Arcanys is based in the Philippines is that its people have the best English-speaking skills in Asia both with respect to grammar and accent. This allows our developers to be put in direct contact with our customers and ensure smooth project development.

You have direct access to your team via email and Skype.



A well-oiled reporting system

Transparency is one key value at Arcanys. We give you total visibility on the progress of your project by sending detailed daily and weekly activity reports (automatically created by a plugin we developed which extracts work logs and arranges it in a neat email report).

You will never be left wondering what your team members are doing.

Agile Project Management

In addition to regular reporting, we provide you with a dynamic way to manage your project through the best practices of Agile development we like to follow (Scrum, Kanban or XP-practices) and using top of the line Atlassian project and code management tools (Jira, Greenhopper, Bitbucket, HipChat).

We offer flexibility on the project management structure by completing the skills needed in your team, depending on the maturity, technical knowledge and time availability on your side, and allowing to work with or without one of our Project Coordinators.

Project Coordinators will help you with requirements and specifications, project planning, following communications and sometimes provide architectural guidance. In some cases, strong lead developers can also assume the role of Project Coordinators.

ChildUp: Early Math

80 Animals to Learn Mathematics

Duration

5 months
2 full time developers

Technologies

Native iOS

Native Android

Mission

Internal project. Conceptualize, design and develop the entire application in both native iOS and native Android.

The EarlyMath application aims to help parents and caregivers teach children from 1 to 5 years old the foundations of mathematics. By playing this game with their children, they will learn the first steps in addition, as well as the names and real sounds of 80 popular animals. With the app comes the ChildUp Early Learning Method, which provides precious information on brain development, early learning, and parenting expertise.

Adletico

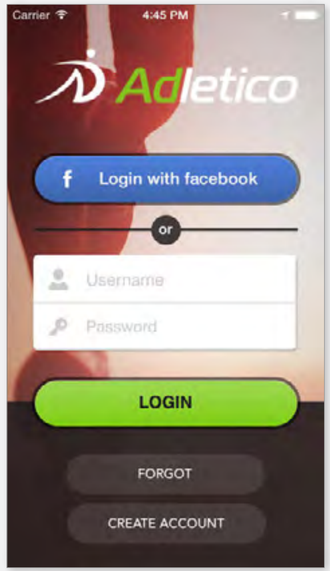
Integrated amateur sports sponsorship platform

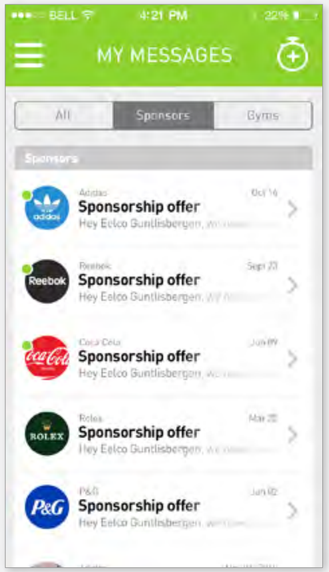
Duration

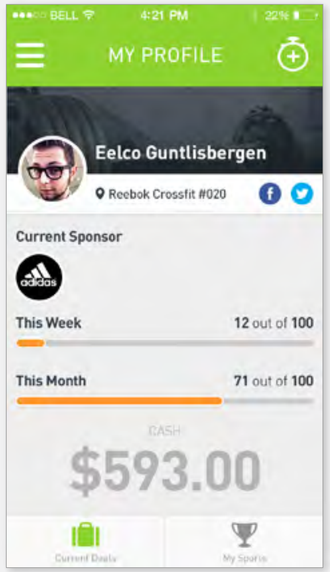
7 months
2 full time developers

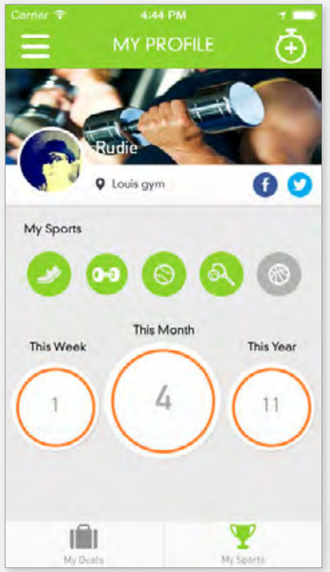
Technologies

iOS 7
Facebook SDK for iOS
Twitter API
Web Service
Symfony2 Backend









Mission

Develop the application from scratch following the provided prototype. We implemented many features during the development of the app.

Adletico has revolutionized the traditionally highly exclusive sports sponsorship arena, and in three years has become the ultimate resource to connect brands with athletes of all levels in North America.
The project is now in a second funding phase and will resume when closed.

Tizen camera

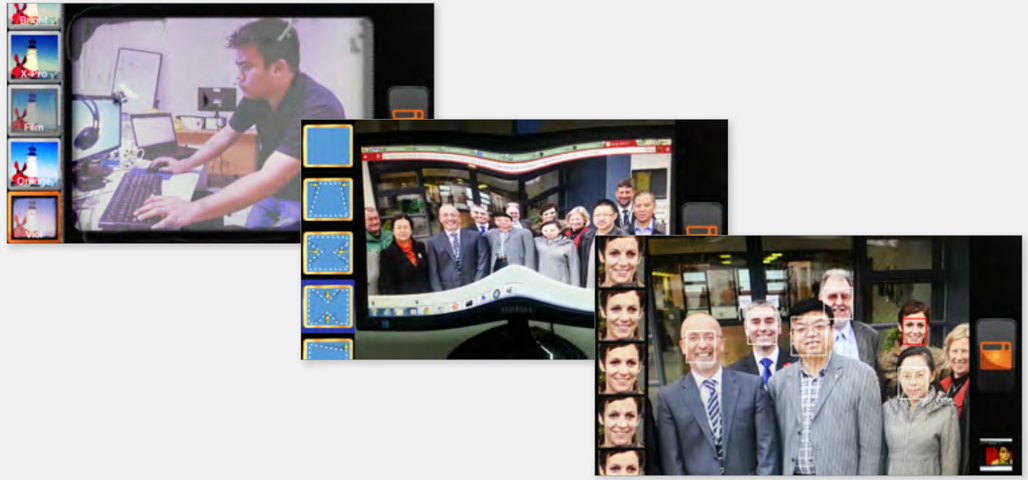
The native Tizen camera filters and image processing features

Duration

6 months
3 full time developers

Technologies

Tizen C++



Mission

Develop the application from scratch by using customer's imaging processing SDK and implement features along the way according to the client's changing specifications. This application runs on Tizen OS.

A suite of camera filters and image processing features that are built in native in new Tizen OS. Camera effects to apply custom filters and frames into their images, Camera Twist to apply custom distortion effects into captured images, Camera Fusion to take two images and merge them using effect masks, Camera Collage to take a series of images and apply them into built in thematic collages and, Group shots to capture a burst of images so the user can modify and fix a person's blink or "improper" face with that of a proper one.

Moving Memories

Capture the moments that matter

Duration

4 months
2 full time developers

Technologies

Tizen C+

Native Android

Mission

Develop the application from scratch for the Tizen OS by using customer's imaging processing SDK whereas the Android version was created based on existing proof of concept demo - and implement features along the way according to the client's changing specifications. This application was developed on Samsung's new Tizen OS as well as on Android.

Moving Memories is a mobile application that allows users to take animated pictures of moments worth capturing. Imaging a scene where there are multiple moving objects. Now, you can stop the ones you want and highlight only the ones which you want to be moving. These clips can be edited as well! From playback mode, length, playback speed, and effect filters, do whatever you want to customize your very own "Moving Memories". Tizen version was showcased in Tizen foundation's booth in Mobile World Congress, Barcelona 2014.
