16 Weeks - v1 Prototyping and MVP
Product development on going

InvenTrack

iOS app, Android app and Web Panels

iOS app, Android app and Web Panels

App Features

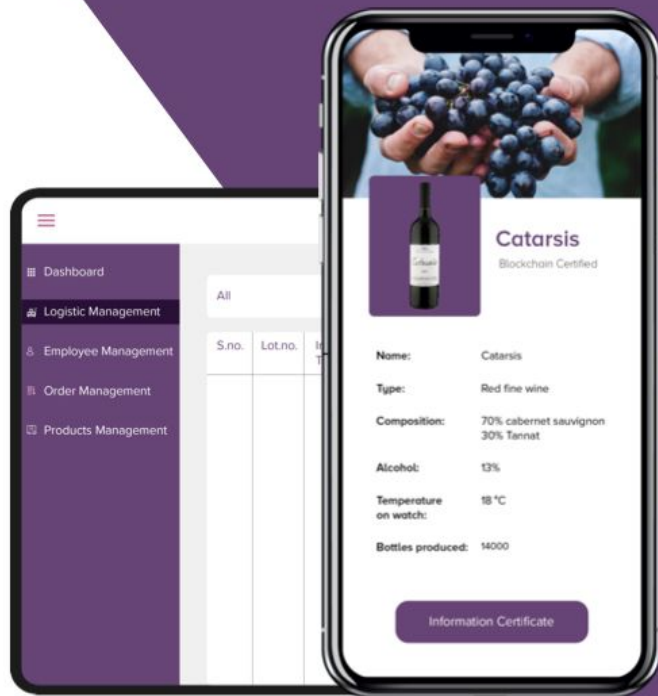

- Creation of a unique identity for every Wine Bottle
- Security Protocol Creation against Tampering
- Authenticity Certification Generation
- End to end traceability of bottles

Key Challenges in the Supply Chain of Wine Manufacturing Company

- Removal of Counterfeiting
- Security Against Tampering
- Eradication of Inauthenticity
- Solving Ownership Registry Issues
- Analytics of Temperature and Tempering Inaccuracy
- Assurance of Zero Sustainability Foreplay

What we did

- Connect all stakeholders across the supply chain.
- Create Optical Label that carries data as filtered as the Wines and place them on the wine bottles.
- Incorporate Hyperledger Fabric to build a blockchain-centered traceability system.
- Wireframing
- UI/UX Design

info@appinventiv.com
91-8826909998

Description

We partnered with a wine refinery to help trace the provenance of wines that were being circulated under their brand name. By incorporating the power of Blockchain at every stage of their Supply Chain, we gave each wine bottle a unique digital identity that can be traced and accounted for in real-time.

Technology Used

Hyperledger Fabric
Angular.js
Node.js
Swift
Java
Amazon AWS

Implementation Time

10-12 weeks

Empire App

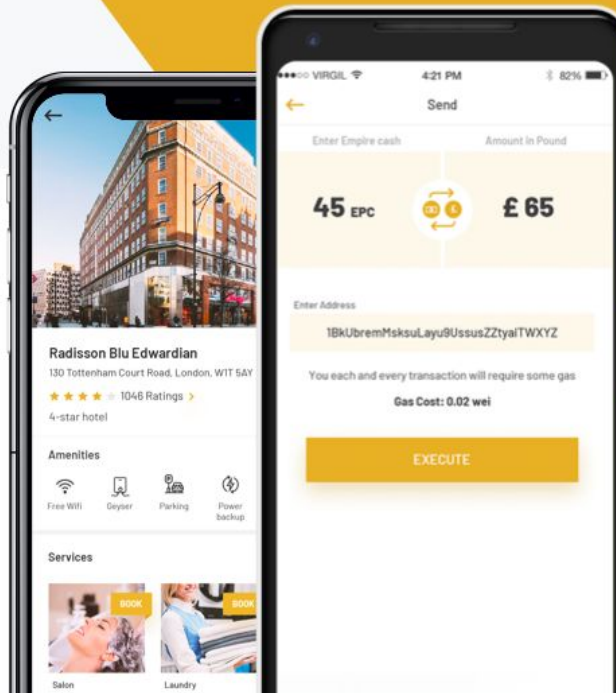

iOS and Android

App Features

- The guest data and room booking transactions are brought on the Decentralized Network to prevent the persistent issue of double booking, extra hotel room charges and incorrect data
- Empire Cash, the cryptocurrency was introduced and developed bring down the miscellaneous transaction costs.

What we did

- Wireframing
- Prototyping
- UI/UX Design
- Blockchain Powered Review System
- EmpireCash creation
- Cypto Wallet
- Smart Contract Development for bookings
- Mobile App for the Empire Guests

Description

We introduced the hotel industry with crypto economics to not just make the whole system transparent but also remove the profit-making intermediary - Hotel booking Services - from the system

</> Technology Used

Blockchain Development

Ethereum Blockchain, Solidity, ERC20 Protocol

Backend Development

Node.js and MongoDB

Frontend Development

Native Android and iOS for Mobile and Angular for Hotel Panel

UI/UX Design

Adobe Photoshop, Adobe Illustrator, Adobe XD, Balsamiq, Invision

Implementation Time

14 Weeks
