DESIGN-LED DEVELOPMENT

Design first leads to better usability - first step to any wow app.

1

Understand your idea

We will give our suggestions on how to implement the idea in the best manner and what features can be added/removed to make it better.

2

Mockups and design themes

We shall create mockups /wireframes to visualize the complete idea, figure out gaps, if any and then establish the complete requirement.

3

Requirement analysis and scope

On the basis of mockups, we shall establish the function points and provide you a detailed work breakdown along with a project plan

4

Development

Development will be done using the Agile scrum methodology, - weekly builds and continuous integration.

5

Testing

Testing at Mindbrowser is taken seriously. We shall create test plans, test cases for your app and deliver to you bug free code.

6

Launch, Marketing and support

As part of the engagement, Mindbrowser shall post the app on the market place on your behalf, will help you in marketing the app by helping you create videos, press releases etc and shall be available for support and future releases.

Advantages

- Quick and clear establishment of requirements
- Changes possible at zero impact
- Better software and lesser chances of failure

HAPPY CLIENTS

I worked with Mindbouser to turn a wireframe app idea into a functioning iOS application, and I could not be happier with their work. They may be slightly more expensive than some of the other companies, but once you work with them you completely understand why. They are hands down the best value for your money. Ayush is a A+ project manager. His English is absolutely perfect, and he clearly understood my project goals and intentions. Throughout this process, he was there to offer advice and ensure the most user friendly process was being designed and implemented. I am already planning to use Mindbouser for another project. Great work on the application Mindbouser!! - The 5-star reviews are already coming in for Prediction Pup!!

SAP GRC and Security Consulting

We hired Mindbouser to complete development of a photography-based application. They were by far one of the best companies we've ever worked with! The application has turned out perfectly to our vision. We'll undoubtedly be working with Mindbouser again.

HAPPY CLIENTS

I would just like to take a moment to say thank you to you and your team for the work that you have performed for me so far. You have been polite, efficient and very thorough and this is all much appreciated when I have so much else to think about. Thank you again and looking forward to seeing more of your great work as we near completion of the project!

FAQs

Who shall be my point of contact?

A project manager assigned to your project who shall be your point of contact throughout the engagement.

How will the project be managed?

Use Jira as a project management tool and the project is tracked on a daily basis through it. Access to Jira may be provided to you as well.

What is the development methodology you follow?

We use the Agile scrum methodology of development. It allows faster iterations and quick builds to show to even your potential investors.

Will you take care of the designs or do we have to do that?

Works both ways for us. If you have a designer, provide us the designs, else we too have a team of top designers in place to take care of the designs

FAQs

What is the process involved in developing my app?

We follow the design led development methodology. Hence the designs and mockups are finalized first. Through this stage the requirement is established and then we move to development, followed by testing and launch. Interim builds that can be installed on device are sent at end of each milestone.

What are the engagement model available?

We provide 4 ways to partner together

Fixed price- If the requirement is clear where we let you know in advance about the cost and time estimate and we sign off

Hourly price - If the idea is still in infancy and design, mockups are not yet ready, then you can engage with us on an hourly model and we can help you structure your idea by discussions, research and creating mock-ups to finalize the work flow

Hybrid hourly and fixed price- We can start with hourly model doing the complete requirement analysis, creating the architecture, designing themes, creating application flow etc . This involves a lot of iterations and communication. Once we all feel satisfied about the way the app has been planned, we can move to a fixed price model

Captive development center- Make our team, your extended team. Mindbowser sets up a dedicated development centre for you with multiple experienced engineers screened to your specifications. From a single developer to a full project team, you can hire dedicated resources as per your needs.

MORE REASONS TO HIRE US

- **LIFETIME GUARANTEE ON CODE:** We will provide you lifetime support on code that we write from scratch so that means even after 1 year you may come back to us. Only condition provided issues are not with integration, software update or any kind of changes done into the code by any third party.
- **IDEAS AND INPUTS:** We keep a close watch on the mobile application industry. Hence, We understand the trends and through experience we probably know what works and what does not. Hence, if you have an idea, we will help you on how to make it better. What should be included in the first version and what could be postponed for later.
- **LAUNCH:** We shall help you launch the app on the respective market place. You just have to get your developer's account and then we shall submit the app on your behalf.
- **MARKETING:** We can help in marketing of your app as well by providing ideas, creating videos, writing press releases, creating buzz about the app on social media, SEO etc.

YOUR NEXT APP !!
