CLIENT FOCUS

Listly makes it easy to make fun lists with a twist. You can embed a Listly anywhere including your own blog. You can ask for contributions from your readers. You can ask them to rank items in your list. You can create conversations around your lists. It's all built in!

Used technologies: Swift, CoreData, CocoaTouch, CoreLocation

Industry: Social

NewsPal is an app for listening to the latest news headlines on your favorite topics while driving, commuting, working out, or on-the-go. Users can subscribe to the news channels and listen to them online. There is also an offline mode for listening to downloaded news.
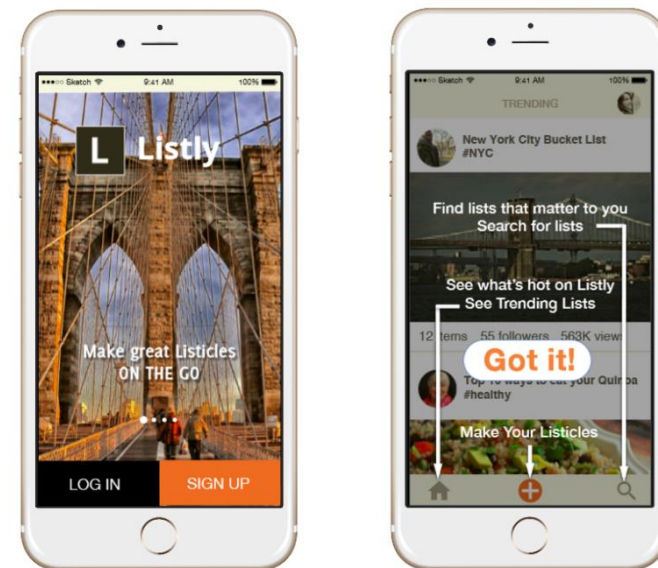

Used technologies: Objective C, Mantle, Harpy, Analitics, THLabel, MBProgressBar, APParallaxHeader, OHHTTPStubs
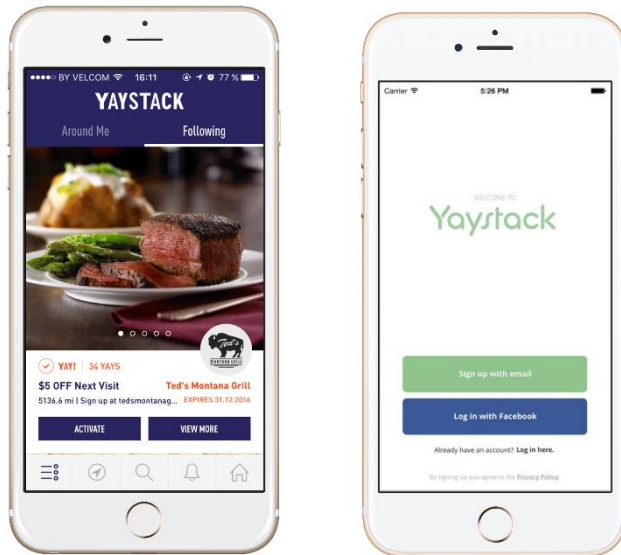

Industry: Social

MyGiHealth was developed to help you feel better by putting the power of information in your hands! The app helps you assess and monitor your GI symptoms, create an Education Prescription© and communicate better with your doctor. You can also receive customized GI wellness tips and connect with a supportive community experiencing the same things you are.

Used technologies: Objective C, Apple Push Notification Service, Google Tag Manager

Industry: Healthcare

Yaystack offers great local deals that are activated by social sharing. Users can leave reviews for businesses, providing a trusted recommendation system from trusted sources. Businesses get risk-free, word-of-mouth referrals and access to a broad network of shoppers. Users can "stack" a deal for later, and also view what their friends are stacking.
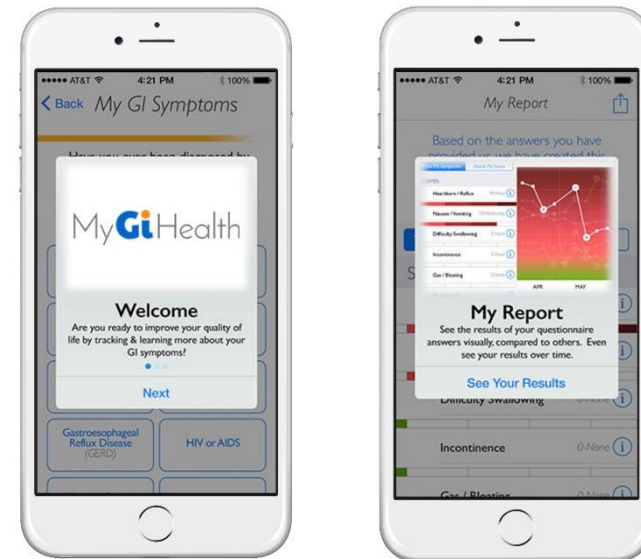

Used technologies: Objective C, iPhone SDK, iPhone SDK UIKit, CoreData, MapKit, Apple XCode
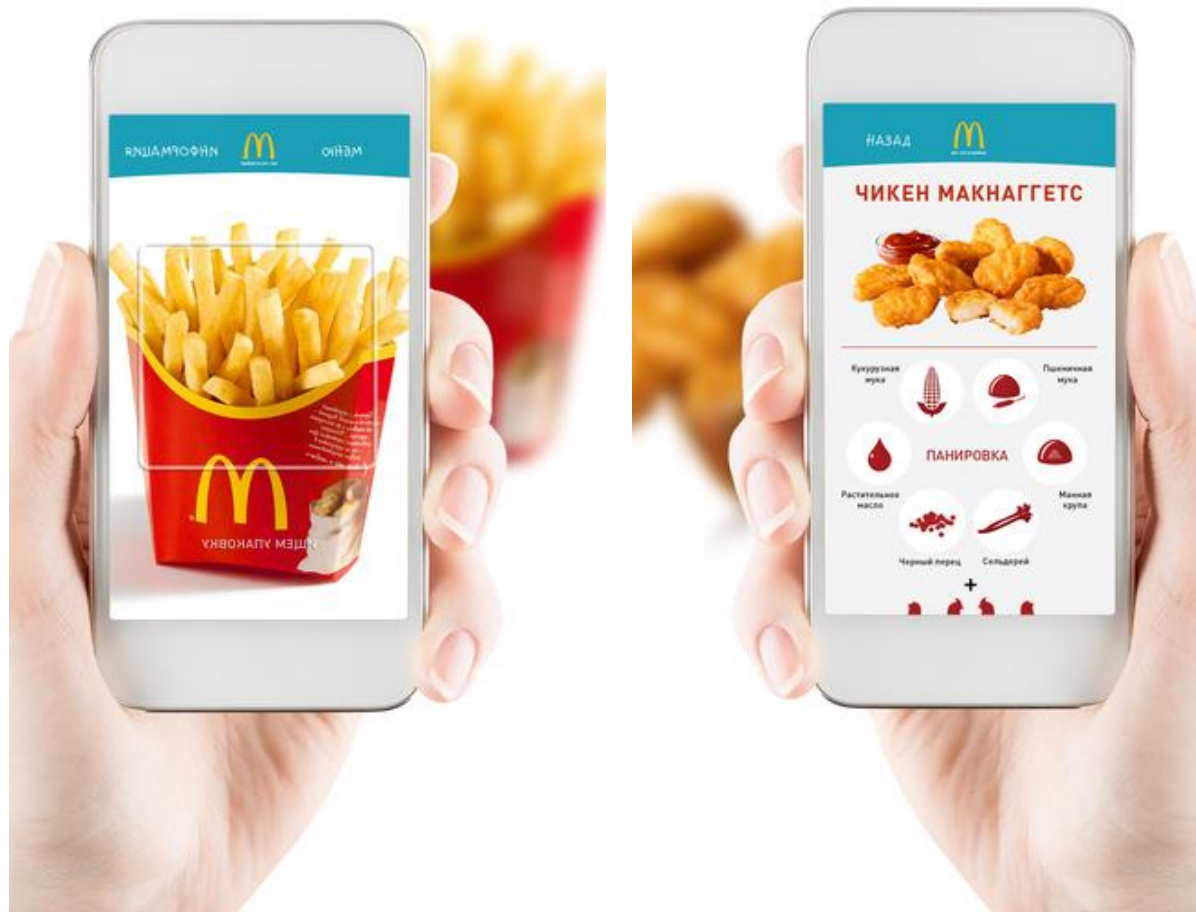

Industry: Social

McDonald's Augmented Reality
application gives customers the chances to get an inside view into the company's cooking process. They can get an overview about the products which are used while cooking McDonald's dishes, technologies used etc. Viewing stars through scanning common items found in McDonald's restaurants such as a box of French Fries, Big Mac etc.

Used technologies: Objective C, iPhone SDK, iPhone SDK UIKit, CoreData, Apple XCode, Vuforia

Industry: Augmented Reality

The **FÖRCH** app brings you the full functional web shop on your smartphone and tablet. With the FÖRCH app, you can order the articles directly around the clock using a search function or barcode scanner and have access to all product information in the latest version. Numerous integrated functions make efficient order processing particularly easy.

Used technologies: Java, Android SDK, AndroidAnnotations, OrmLite, Apache

Industry: E-Commerce

SnoozWiz is a Sleep Monitoring App that monitors your sleeping activity while helping you adjust your sleeping schedule. It allows you to set up a customizable alarm on your profile, receive daily tips, get a detailed analysis of your sleep and make you sleep smarter!
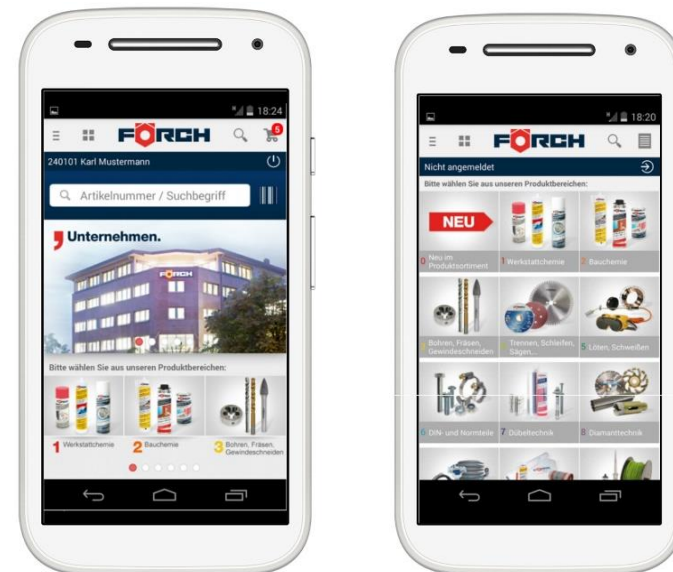

**Used technologies**: Android SDK, Java, Dagger 2, Retrofit 2, Facebook/Twitter SDK

Industry: Healthcare & Lifestyle

Educational mobile app for the medical students. Allows to access synchronized **CanadaQBank MCCEE** question bank data across all platforms, makes possible for users to create a test with their customized level of difficulty/subjects, view test history, continue their next test/assess history from another device etc.

Used technologies: HTML, JavaScript, CSS, Ionic, AngularJS, Cordova

Industry: E-Learning & Healthcare

myPatientMatch helps users find the patients that have the most in common with them, so they can share health experiences and find unprecedented social support. All health data is anonymized and contributed to patient-centered research.

Used technologies: JavaScript, AngularJS, Ionic, HTML, CSS, Apache Cordova, Rails for the API, Highcharts
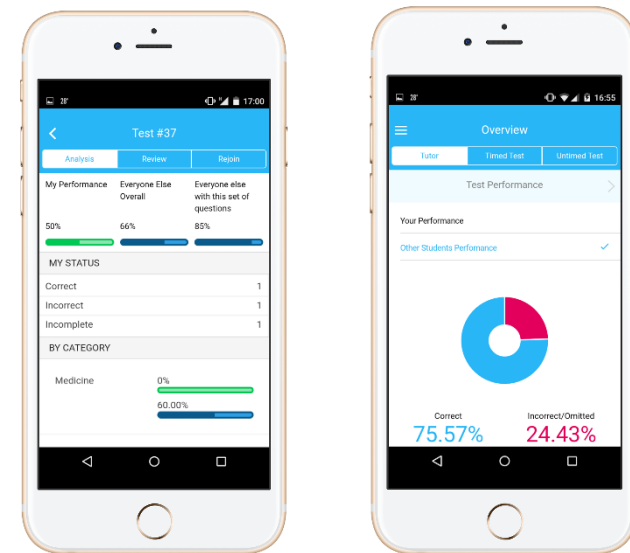

Industry: Healthcare

Note: The app is not in app stores as it was reserved by the team for private research use.
