Web Design and
Development

Mobile Apps
Development

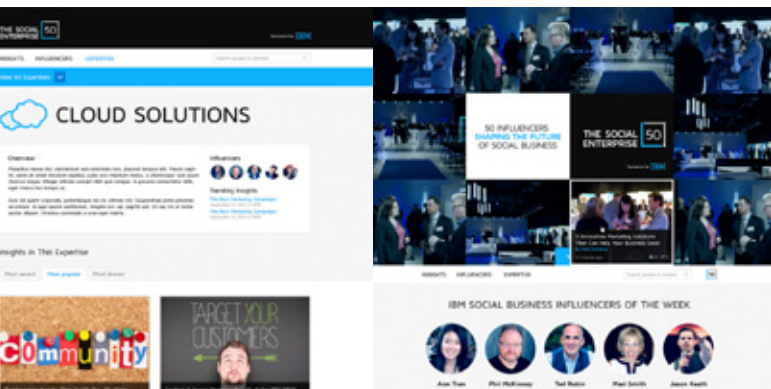

Need to reach more customers? Want your website to beat the competition? Require programming support? Opus has a team with over 10 years experience in working with top global brands and companies, evaluating needs and implementing affordable solutions.

Opus has helped hundreds of companies move their business forward including **IBM, Rovio, Nasdaq, OMD Worldwide, SEB, Danske Bank and Telia.**

Furthermore, Opus is able to partner with your business off-site to minimise cost and increase affordability. The team believes in keeping the communication channels open at all times so that your expectations are met.

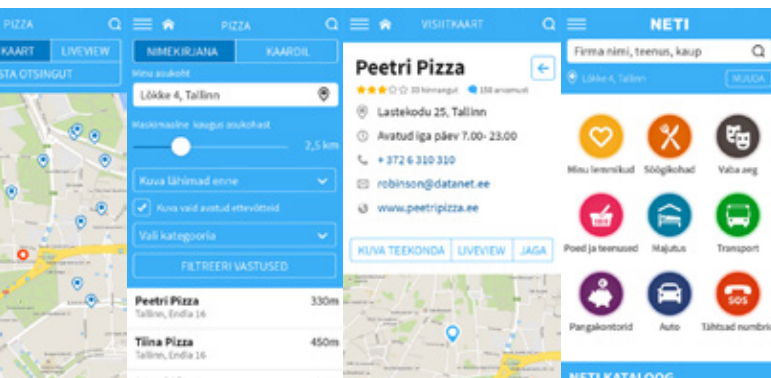

Portfolio

Opus designed and developed IBM's Social Enterprise website. The site was based on the Expressible content platform that was created and engineered in-house.

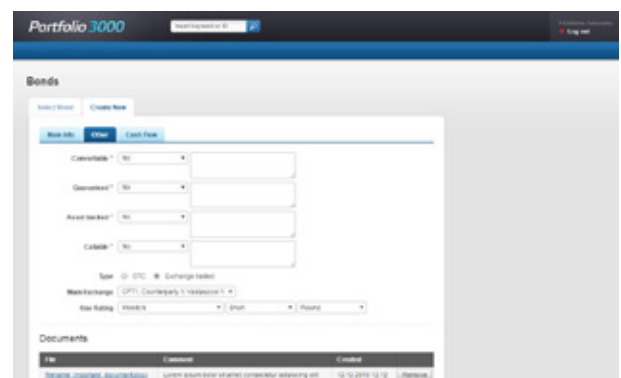

Opus was asked to develop the user interface for SEB Internet Banking. The team designed and coded the UI, optimised the workflows and conducted extensive end-user testing before the solution went to development and later, live. SEB is one of the largest banks in Scandinavia.

Opus developed Telia's Neti Mobile App that helps users to quickly search the database for companies based on the user's location. Quick overview, tools to contact and navigate to the found company provide a simple approach to enable users find information.

Opus created the user interface for the Nasdaq Tallinn bonds trading system. There were many complex features and requirements of the system that made the project challenging. The outcome we pioneered is very user-friendly and intuitive despite the large volume of data handled.

Opus designed and developed a powerful and responsive website to enable Rovio showcase their famous games. Rovio's Angry Birds is one of the bestselling games of all time.

Opus designed and developed OMD's Cannes Festival and CES event sites. The sites were designed on the Expressible content platform engineered by the team. OMD Worldwide is a global media communications agency.

Key Technologies

The team also specialises in Laravel, Elastic, MySQL, MongoDB, Redis, Angular.js, Backbone.js and **many more**.
