

Android Development

MOBZWAY

Android is a Linux based operating system for smartphones and tablets from the Google-sponsored Open Handset Alliance. Android programs are written in Java and run through Google's "Davlik" virtual machine, which is optimized for mobile devices. Android is the largest installed base of any mobile platform. Android provides a single application model that allows deployment of apps broadly to hundreds of millions of users across a wide range of devices.

We have a team of experienced & innovative mobile app developers who create apps using the Google Android SDK. We involve in defining mobile app strategy, designing case-appropriate innovative solutions to complex problems, and deliver secure, high-performance applications.

Experience & Strength

Game Development

Business Applications

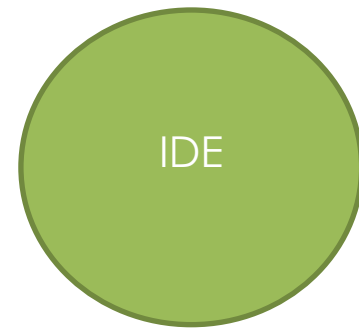

Lifestyle Applications

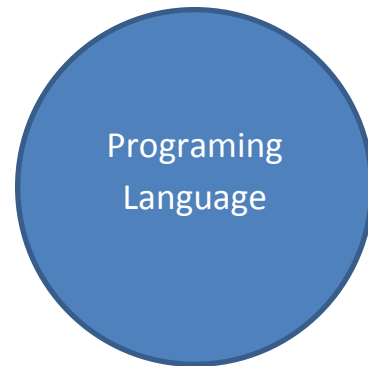

Web Services (RESTful API)

Tools

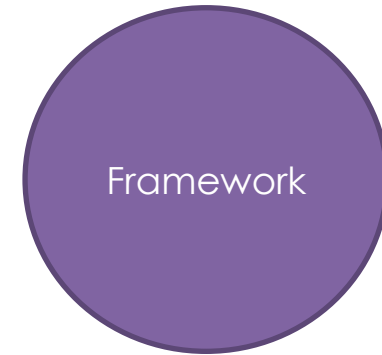

- » Eclipse
- » Android Studio
- » NetBeans
- » IntelliJ IDEA

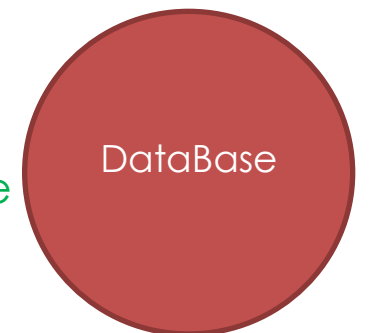

- » Java

- » Android Cored Framework
- » (With latest version 5.1 Lollipop)

- » SQLite

Gootli

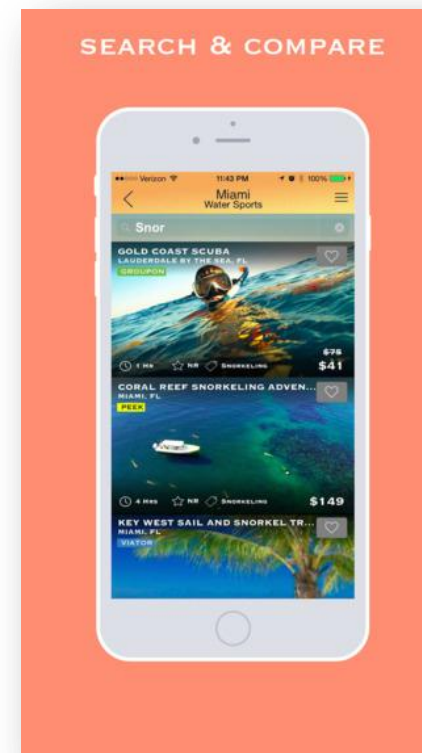

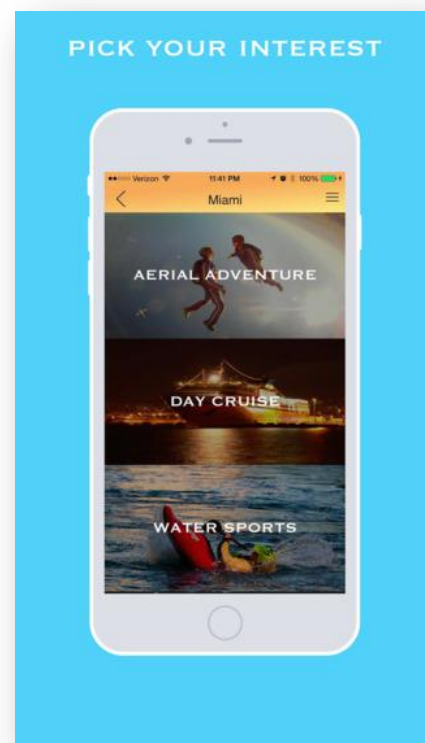

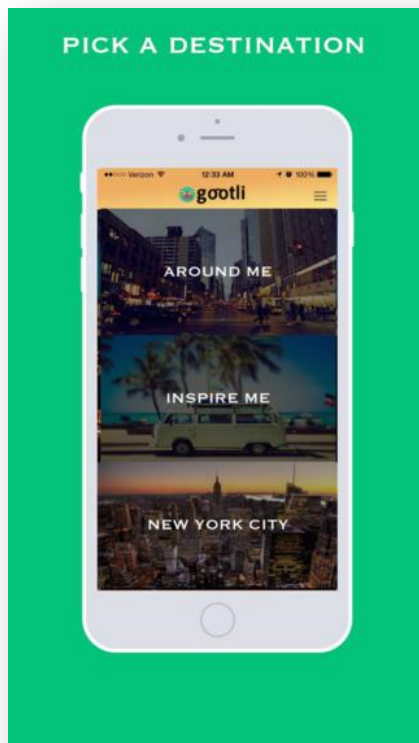

Domain: Travel

Platform: Android 2.2 and Up

URL: <https://play.google.com/store/apps/details?id=com.gootli.app>

Description:

Gootli's all-mobile platform curates high-quality activities from most of the travel marketplace, displays them in a visually beautiful interface and makes them easily bookable. You can look for activities based on a number of categories. You can even search for a specific activity around you, compare and book them instantly. We focus on cost-conscious travelers who have a flexible idea of what they want to do on vacation or a weekend and see if there are deals available. We empower people to travel more by taking 15 to 25 trips every year.

Success Story

Buscapé

Domain: Lifestyle

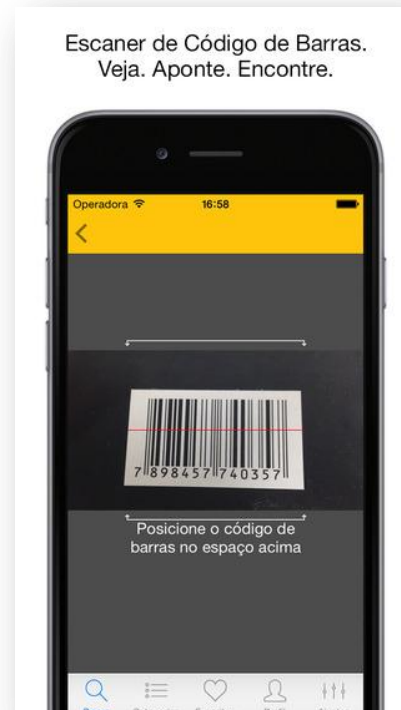

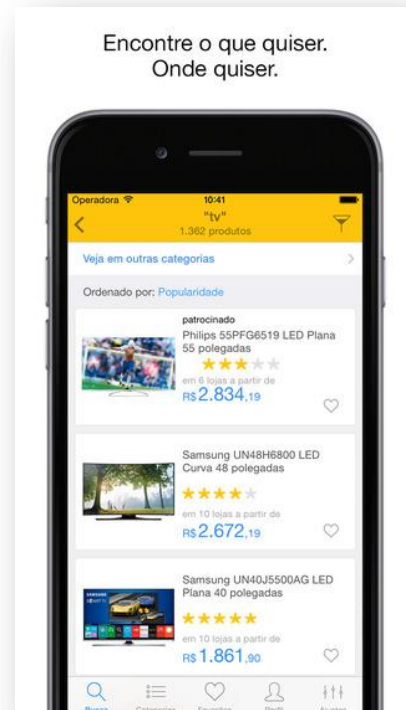

Technology: Android 2.3.3 and Up

URL: <https://play.google.com/store/apps/details?id=br.com.buscape.MainPack&hl=en>

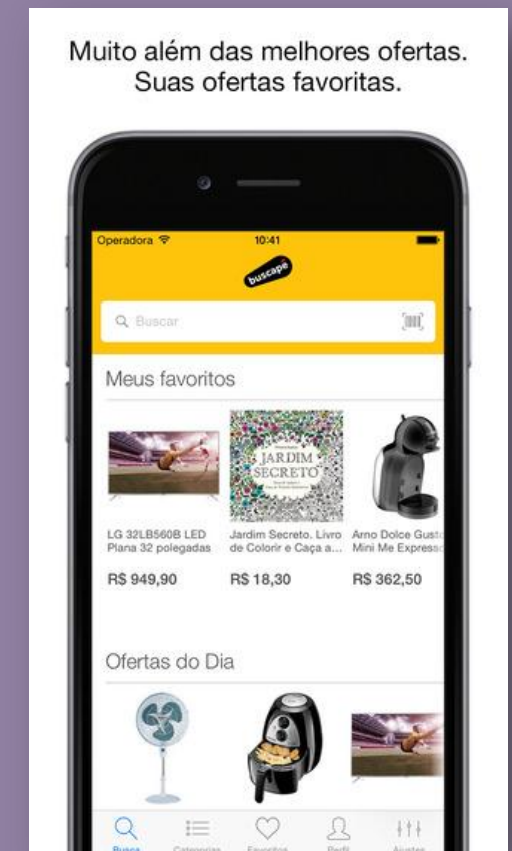

Description:

Buscapé app allows you to compare prices and save. You will have immediate access to important information to decide the purchase of products such as: price from online stores, selected offers, product and store reviews, store locators.

If the seller does not offer the best condition, you can buy directly from the app and rely on the largest retailers in Latin America, besides receiving the product at home.

Success Story

Let Out

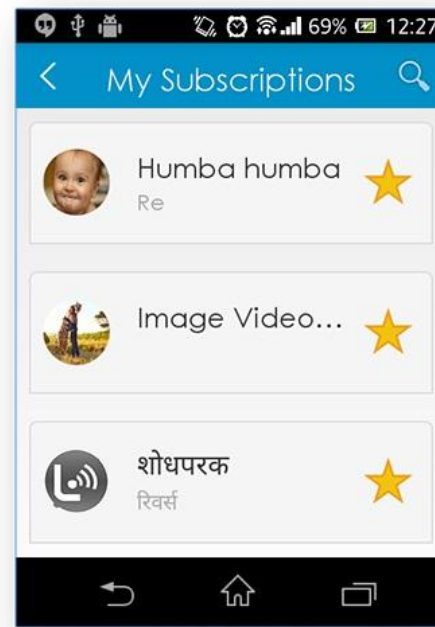

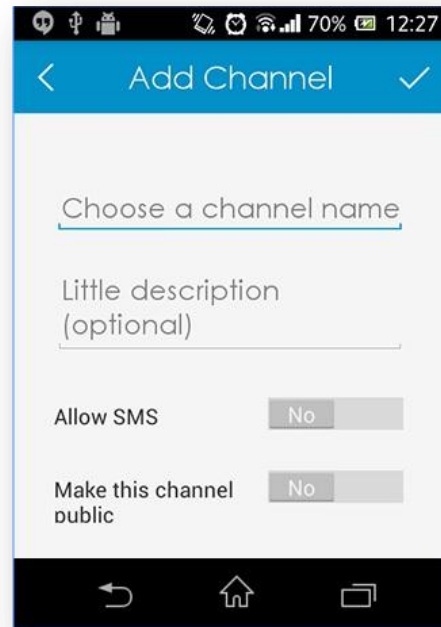

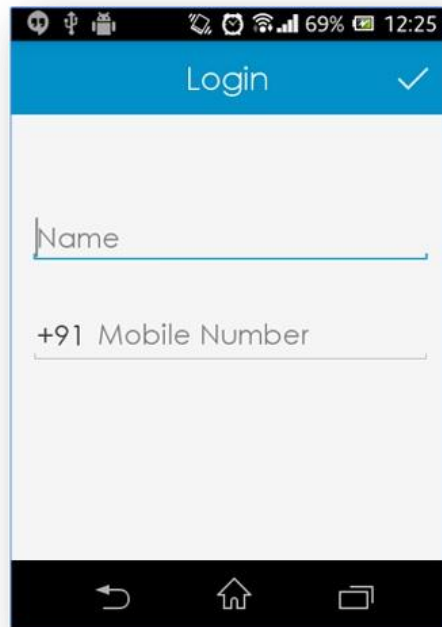

Domain: Lifestyle

Technology: Android 2.3 and Up

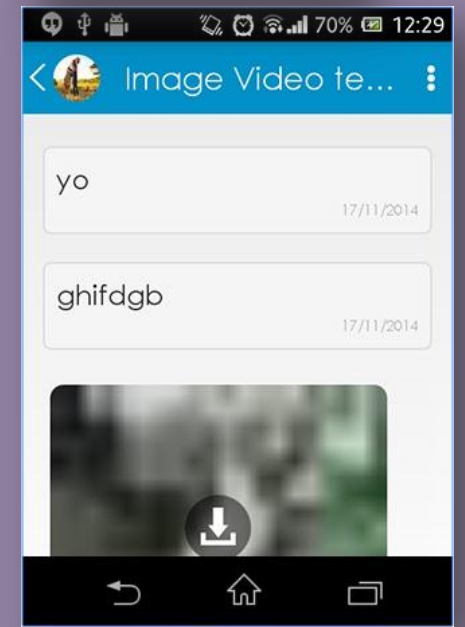

URL: <https://play.google.com/store/apps/details?id=com.letout>

Description:

Let out lets you subscribe to and send instant updates about the things you care about. With let-out, you'll know immediately when there is anything happening about the things you care about like when there is a breaking news, when there is a new funny video, when a review of a new release movie arrived etc.

Success Story

My Police Department

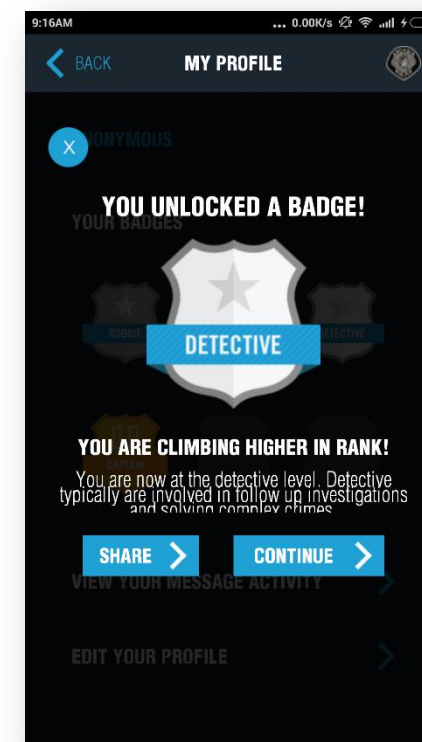

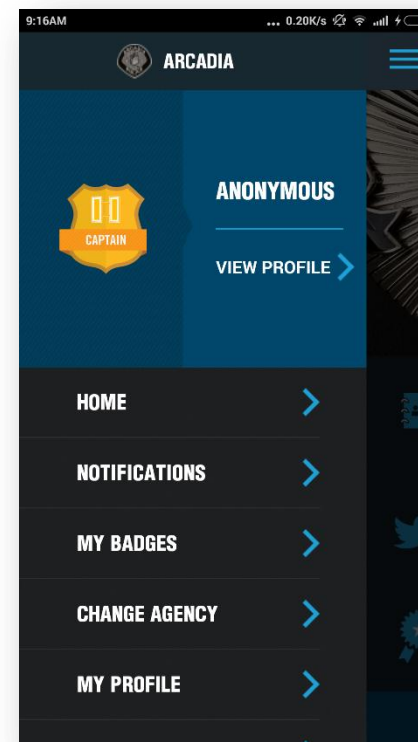

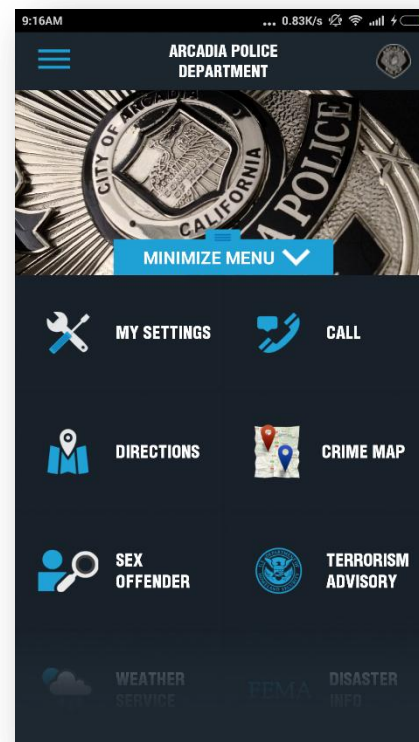

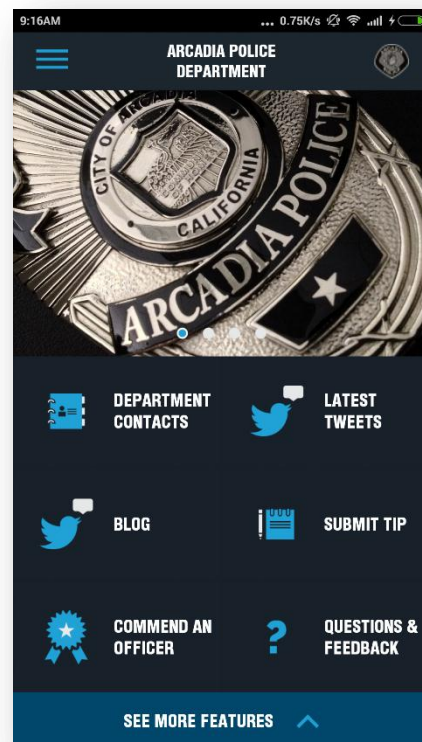

Domain: Productivity

Technology: Android 2.3 and Up

URL: <https://play.google.com/store/apps/details?id=com.project.android>

Description:

Placing law enforcement and public safety services at your fingertips! The MyPD app is built to connect the public to their local police and allow the community to become more involved right from your smartphone. Local, State, and College Police Departments as well as other law enforcement agencies are using this app to provide you with better service and improve communication.

Financial Details

Development of an android application depends on multiple parameters like UX, features & its functionality and that's why it's always tough to set a fixed price for an app development until scope is finalized. So the best way to go for app development is Hiring Dedicated Resource.

Skill Set: Java, Android Studio, SQLite, Parse, Google APIs

Experience: 3+ Years

Minimum Projects: 4 project lifecycle
