

ABOUT US

■ We work since
2004

■ **10+** years
developing for
Windows, Mac
IOS, Android

Experts in mobile, web and software development

■ **30+** Large,
medium and small
size clients
worldwide

■ We work Globally:
Customers from
10+ countries

■ Team of **25+**
employees

■ EU-LOCATED

- Representative
office in Poland
- R&D office in Ukraine

OUR SERVICES

We provide:

- Client-server solutions
- Cloud technology
- Multimedia processing
- Cross-platform solutions
- Data processing

Benefits of working with Us:

- 10+ years of experience
- We solve problems
- Full development cycle
- We offer improvements
- We complete any projects

We have large experience developing software for:

- Merchandising
- Navigation
- Presentations
- Marketing
- Communication

We offer solutions for:

- ✓ Mobile platforms - IOS, Android, Windows Phone
- ✓ Stationary computers - Windows, Mac OS X
- ✓ Web-based solutions

OUR PROJECTS

MEDIASHOUT REMOTE

The idea: An additional tool for MediaShout that will support IOS mobile devices and will be controlled / viewed remotely

A remote control for Media Shout.
It's an application developed especially for iOS devices to allow presenting and viewing projects mobile.

Application consists from two parts.

First is a custom build web server which acts as a module in Media Shout.

A fully custom web server which is created for handling web requests received from iOS device. An iOS device application itself is a remote control which allows to view what is currently on-going at the screen.

OUR PROJECTS

WORLDTIME

💡 **The idea:** To create an introduction of our experience in Android Wear app development

- Simple, yet very useful WorldTime watch face for Android Wear with two extra time zones feature
- For better battery performance, screen updates only if watch face is on and minute/hour/time zone is changed. Change Wearables time zones in mobile application settings.

OUR PROJECTS

PROJECT MANNERS

The idea: to create SAS, school assignment system in order to work with children behavioural deviations using quite limited budget.

Details:

- ✓ An innovative web-based app designed to streamline and simplify behavior data collection using mobile devices.
- ✓ Application was created on .NET with usage of HTML 5, MS SQL used for data storage.
- ✓ A special mobile website for simply data input was created on own framework and has been able to work offline (without internet connection)
- ✓ With exceptional work of our designer we created good, reliable piece of software that is currently used in 7 schools for children with behavioural deviations

OUR PROJECTS

WEB-PROJECTS

Successful web-projects of our PHP Developers : CMS(Content Management System) used for developing more than 20 sites

Our developers worked on projects:
basquare.com
loda.gov.ua
pizzalviv.com
barvinok.ua
& many others

We never forget our clients and products we created for them

We are ready to provide any kind of help whenever they need new request feature or just advice - we will be there to help, would it be weekend or off-work hours.

Job done good!

CLIENTS RECOMMENDATIONS

To Whom It May Concern:

I would like to recommend Taras Sheremet's software development team for positions in your organization or for working on your software projects. Taras' team includes himself, Taras Vozniak, Roman Lenio, Volodymyr Kulyk, Nazar Semenyshyn, and Alexander Kuzminsky. From January 2013 – May 2014, I have been this team's direct supervisor.

This team did an excellent job working on multiple projects for our company. While I supervised the team, they worked on church presentation software named MediaShout 4 and MediaShout 5 on the PC and Mac platforms. They also worked to develop the Android version of Worship Band in Hand, a complex audio app built for churches.

During the time I supervised this team, they acted professionally, communicated well, responded to my requests quickly, and delivered high quality work. Not only did they do their job well, but they were always friendly and a lot of fun to talk to.

This team would be a great addition to any project or company.

Sincerely,

Lee Bridges
Vice President & Director of Innovative Technologies

To whom it may concern:

I would like to recommend Alexander Babintsev and his team. From November 2012 to May 2013 I worked with Alexander and his team (Anton Generalov, Svyatoslav Hnat, Misha Pritula and Oksana Drevich) as a product owner. I hired them to work with me on a web-based application named BehaveWrite.

The team did an excellent job working on my project. The project was a hybrid online/offline web application using HTML5 and MSSQL. It was designed to mimic iOS functionality while still being a web-based app. Additionally, we did significant refactoring of the existing code to improve product flexibility and responsiveness.

During my time supervising this great team they acted professionally, communicated well, responded to my requests quickly and delivered high quality work. Additionally, they were always friendly and fun to talk with.

I would be glad to recommend the team as a great great addition to any company or project.

Sincerely,

Nathaniel Holzmman,
President of Holzmman Enterprises
