ABOUT THE PROJECT

This app is made for enthusiasts of healthy lifestyle.

The platform helps people who want to start the adventure with sport and balanced diet to change their lifestyles, improve physical fitness and take care of their health.

The application gives trainers the opportunity to publish videos and posts containing diet and training plans as well as tips on exercise, nutrition or effective sleeping techniques.

CHALLENGE

The KixxFit application was also created for trainers or dieticians who could share their knowledge and experience with users.

Therefore, our goal was to build an advanced financial model that would allow for effective coordination of transactions based on a series of actions taken by users. The challenge was not only to create an intuitive application for the user, but also to prepare a platform enabling trainers to manage their business.

SOLUTION

Within 6 months we have created a unique application that encourages thousands of users around the world to change their lifestyles, and helps a large community of coaches and dieticians develop their business activities.

The KixxFit application provides well-proven solutions, helps to break down barriers, gives motivation and instills passion and persistence in the user. The platform's functionality, transparency and intuitiveness is the key of its success. We are especially proud of the original design that makes the application outstanding and memorable.

ABOUT THE PROJECT

The app that was born out of love to discover and passion for new technologies.

The platform enables the user to find a flight in any direction at the most favorable price. Thanks to the application, the user receives information about current ticket prices for the desired destinations twice a day, so there is no need to constantly revisit websites of individual airlines and compare their prices on your own. The application will do it for you.

The potential of the product lies within its functionality, intuitiveness, simplicity, efficiency and, above all, the possibility to save time.

CHALLENGE

Maintaining the application in a simple and readable form to reach a large number of users for whom the solution would be intuitive.

The challenge was also to create an effective search engine filtering databases of millions of flights in order to find the best air connection at the most favorable price, including transfers or discounts for travelers.

SOLUTION

Within three months we've created a unique product which is characterized by simplicity, efficiency, functionality and stunning design.

The application is noteworthy due to its potential (practicality and convenience), form (transparency and intuitiveness) and originality. We are particularly pleased to create such a unique application in its category.

Audiodelic

The one and only application dedicated to the Polish press on the market

ABOUT THE PROJECT

The application with the largest database of Polish press podcasts.

Within this platform, the user is able to find thousands of current and archival articles recorded as podcasts by professional lecturers.

With the aid of one application, the user has the access to the largest Polish newspapers in audio format. Reportage, feuilleton, reviews, interviews, essays ready to listen thanks to a few clicks. The application is completely free of charge for the blind.

CHALLENGE

To create an application that would allow easy access to the diversified daily press for a wide audience.

Appropriate optimization of the application for the blind was also a difficult task. Another challenge is the continuous development of the platform, its adaptation to market changes as well as meeting expectations of new users.

SOLUTION

We have created an application that has become a leader in its group. The precursory nature of the platform builds its undisputed position in the industry.

Intuitiveness, transparency of form, performance speed and personalization make the application very popular and its reach is constantly expanding. We are very proud that our work can also improve the quality of life for people with disabilities.

Minifigs

The largest LEGO collection in the world available online

ABOUT THE PROJECT

The application was created for the collectors of LEGO figures.

Thanks to the platform, LEGO fans who would like to expand their collections can find information about the figures of their interest, find rare copies, read reviews and create their own personalized catalog online.

The application indicates the price of each minifigure enabling the user to calculate the value of their entire collection.

SOLUTION

The implementation of advanced image processing algorithms that enable the user to take a photo of their figure and find similar items in the online collection.

The challenge was also to create a very simple but readable UI that would provide the user with convenience in using all the functionalities.

SOLUTION

We have built an application that effectively reaches the target audience focused on a shared passion.

Not only does the platform facilitate the user's collection management and extension but it also affects the expansion of the collectors' social network and their contacts with each other.

MyLed

MyLed - an integrated network of thousands of LED media, dedicated to outdoor campaign realization, distributed all around Poland.

As a company, we were responsible for development and maintenance of the platform in order to realize the advertising campaigns on DOOH digital media. Our task was, among others, the transformation of the CRM/ERP system through extension of functionality and implementation of numerous automation systems.

We are very pleased that we have contributed to the significant development and transformation of the platform, which enabled MyLed to merge with Jet Line and become the industry leader.

Neurodiversity App (ND-App)

The application created to thoroughly understand and support the "neurologically diverse" people.

The platform enables better understanding of people struggling with autism, dyslexia, dyspraxia, ADHD and language disorders. By answering a number of questions, the user is provided with their personalized post-analysis profile. Thanks to the application, the parent receives valuable tips to improve the educational process of their dysfunctional child.

The challenge was to create an application dedicated to people with disorders, which required a specific approach to UX/UI and a suitable design of particular functionalities.

Walter

The application supports the user in a friendly process of sending service and warranty requests thanks to an innovative solution of scanning QR codes of devices.

Within the platform, the user receives much information about the product's specifics and its technical parameters. The application presents information about current offers and discounts, and enables contact with the service center.

The authorial approach in the QR code scanning results in the application's operation efficiency as well as an effective management of user requests submitted for the service center.
