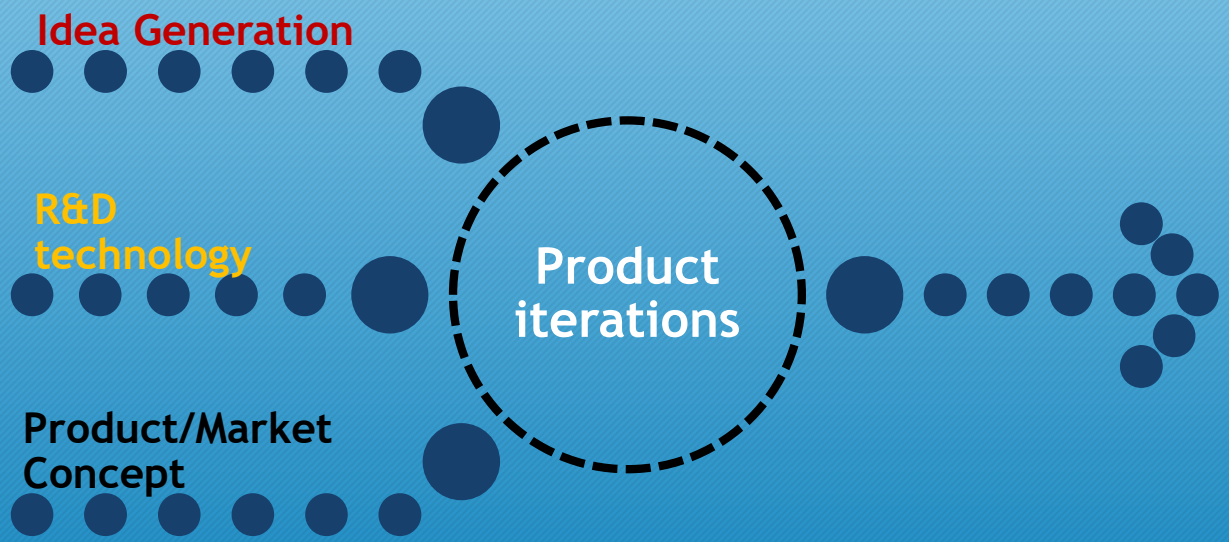
http://www.ledaled.hr/

2CS_Product Development Methodology



Product Iterations *are series of* ***A/B tests*** *that produce several simultaneous outcomes on same inputs → Survival of the outcome is based on workability of each* ***prototypes****. The most workable prototype produces the* ***beta version****.*

OUR SERVICE APPROACH: SaaP and PaaS

Focus

For Software services

Cutting overhead in delivery process → *direct approach*

Supporting upgrade of core solutions without dispersing knowledge.

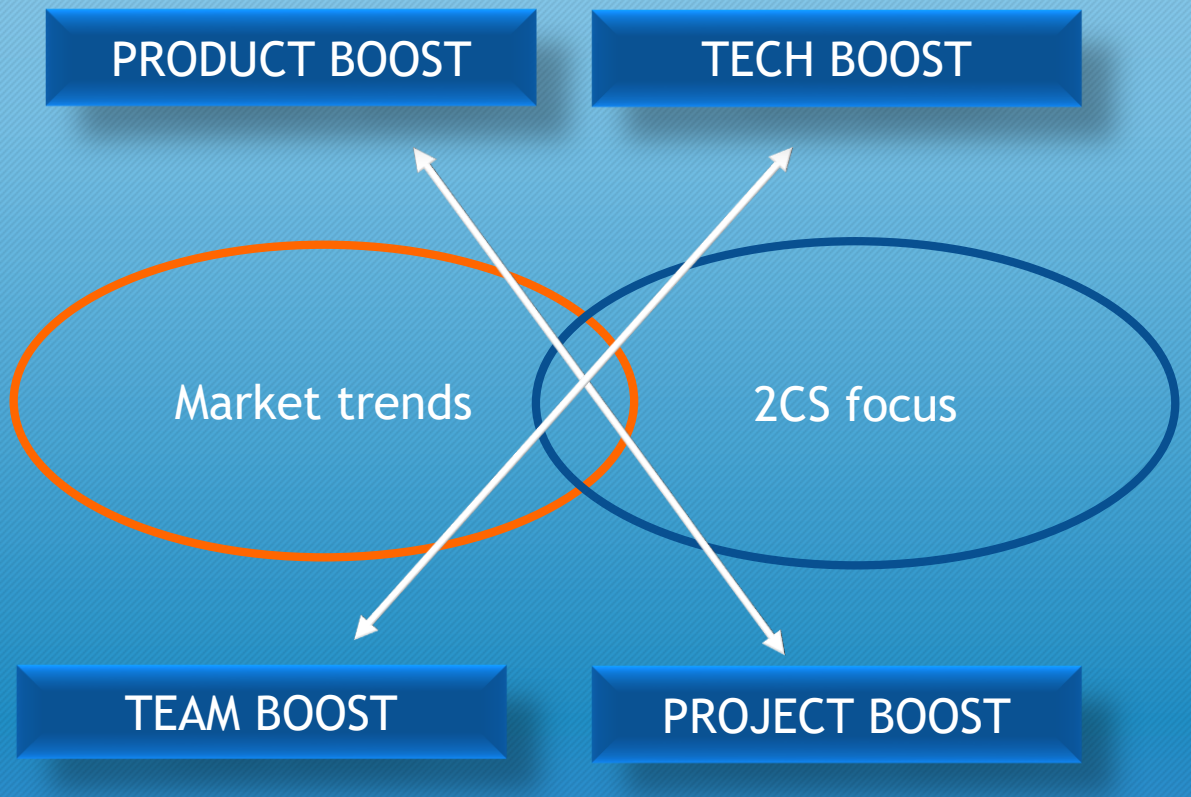
For Software products

Auditing products by applying *continuous improvement approach*

Project generation starting from product concept.

Our service portfolio

4
Programs



Product Boost (audit service)
Identifying complex problems in product development phase and/or solving them by minimizing risk of late-response.

Tech Boost (custom- fit tech modules)
Upgrading software solutions with latest tech (2016) by working with "*incremental changes*" approach.

Team Boost (remote dev. team booking service)
Providing additional skills and tailored management of them, by fitting them with client's methods and practices.

Project Boost (a safe approach to work on hours of dev. model)
Working on a project from scratch mainly focused on ensuring respect of deadlines in more affordable ways.
